A passion for detail

Still capturing the big picture

Some like it particularly secure, others comfortable, others barrier-free. Everyone, however, wants a door that's energy-efficient, airtight and burglar-resistant. One that provides protection while still being a good first impression for the house.

With our lock solutions and extensive range of accessories, you are all set to demonstrate your expertise when it comes to doors. Customised doors, tailor-made as the wishes of your customers, yet all in series production and from one single source.

Our promise Your benefits

Security

We specialise in burglar resistance and retrofitting. Trust in our experience – mechanical and electronic.

Accessibility

With us, you get through life without obstacles. Provide zero thresholds, easy-to-operate or automated elements.

Energy efficient

Improve your impact with sustainable windows with gaskets and thresholds perfectly matching the hardware.

Surface protection

Silverlook-Evo and Tricoat-Evo make hardware even more resistant, durable and smooth-running. Added convenience during installation and operation.

Smart Home

Our smart building components make living more comfortable and secure. Just ask us.

Partnerships

We support you from the initial enquiry through to after-sales service. Our employees are being at your side.

Your success Our service

As your full-service provider, we are at your side throughout the entire process. Our services support you from element design to after-sales. We offer you services relating to standards, products and digitalisation. Do you have any questions? We are here for you.

Your benefit Our sustainability

Sustainability is the basis for future-orientated construction. That's why you can rely on us. As your supplier, we understand sustainability holistically – ecologically, socially and economically. The Austrian "Circular Globe" label, for example, certifies our endeavours in the circular economy according to strict criteria.

Instinct by MACO

Fully electronic locking system

Revolutionise your door design with Instinct by MACO, whose innovative technology provides unique design options. There are almost no limits to door height, width and shape. The locking components can be installed in the sash, and also in the frame. This allows particularly narrow profile views and ensures a clean door front.

Implement unique pivot doors with locking on both sides of the door. This creates unrivalled tightness and security.

THE LOCK WITH THE HORSE'S HEAD

Ensures high contact pressure and secure locking

ELECTRONIC ACCESSORIES

System cables, cable transitions, gateways and power supply units. Everything from a single source!

EMERGENCY POWER SUPPLY

Guaranteed at all times thanks to USB-C power bank

ELECTRONIC HANDLE

Convenient one-handed operation – as with conventional locks

Instinct App Intuitive access control

...for cleaning services, neighbours or tradesmen. You can open the front door conveniently via the App or assign authorisations for spontaneous one-time access, time-limited access or day-release. Optional child safety lock and a complete log of door openings ensure top security and control.

INSTINCT
MOBILE APP

M-TS

The fastest motorised lock

Do you want to maximise convenience and speed? Then, the MACO motorised lock is just right for you.

Ensuring you have a clear competitive advantage thanks to its sophisticated technology. M-TS achieves its world beating speed due to the motor being located directly next to the main lock case. The M-TS offers homeowners unprecedented convenience in terms of opening speed and options in intelligent access control, as well as, the perfect compression and security thanks to MACO triple latch technology.

And one more thing: closure monitoring is integrated in the M-TS as standard.

STANDARD INSTEAD OF FREEWHEEL CYLINDER

As the drive motor is decoupled from the cylinder

CONVENIENT OPENING

and controlling access via the Instinct App

TRIPLE-LATCH TECHNOLOGY

For high closing force and energy efficiency

MOTOR RIGHT NEXT TO THE MAIN LOCK CASE

That makes the lock so fast and quiet and requires only one milling operation

No panic at the emergency exit

With the M-TS and the A-TS lock, you can also implement single-leaf emergency exit and panic doors in accordance with EN 179/1125 (with changeover function E).

A-TS

The self-locking automatic lock

It's the only automatic door lock that locks when closing the door. A-TS throws all its locking points and the deadbolt just by closing the door. This is highly convenient, recognised by insurance companies and VdS certified.

Utilising the MACO triple latch technology, A-TS enables perfect closure from the top of the door to the bottom, ensuring exceptional gasket compression and reducing the chances of your doors bowing. -

Do you want the A-TS to unlock motorised or keyless? Then, simply add the motor.

**COMFORT MOTOR
FOR A-TS**

LOCKING BAR

Extends automatically and locks keylessly

CONVENIENT OPENING

Via finger scan, code entry or Instinct App

TRIPLE-LATCH TECHNOLOGY

Controls the contact pressure separately from the locking mechanism

DAY-RELEASE

Insert the E-opener and activate the faceplate slider

Smart home capable

- › Do you want to combine secure locking with convenient opening? Then, simply add the motor to the A-TS and combine it with plug-in access solutions.
- › You want it smart-home compatible? Simply add closure monitoring with bolt switch contact and integrate it into conventional alarm systems or smart home systems. All VdS certified.

Z-TF

The semi-automatic door lock

The triple-latch lock with crank latch ensures perfect contact pressure and quiet, secure closing. Automatically tight, manually locked – that's what makes this tried-and-tested lock a classic in the Protect family. The new version, which includes MF-HO locking (multifunctional latch and hooks), is based on the same platform as the A-TS and M-TS locks. Score extra points with your customers, as you'll be able to offer them a range of models with this lock.

EASY DAY-RELEASE

With just one E-opener instead of three

SAFETY PIN

Practical, safe, versatile – Z-TF with up to 4 safety cams as an alternative to hook locking

TRIPLE-LATCH TECHNOLOGY

Closes particularly tightly

CRANKED LATCH

For smooth and quiet closing

One striker plate platform covering multiple locks

Why complicated when it can be made easy?
Whether semi or fully automatic or mechanical – every lock with the MF-HO closure is based on the same striker plate range. This means you can produce A-TS and M-TS on the same basis and increase your productivity.

Z-TS

The smoothest security lock

Without the shadow of a doubt, our Z-TS lock is the smoothest drive gear lock base on the market. It just keeps on going, and is as reliable as a Swiss watch.

That's not all. It's ultra-secure too. The drive gear and cranked latch deliver smooth operation, while the main lock case and four additional lock cases, with their hook and bolt combination, make the lock highly burglar-resistant. In fact, it's so secure that it's the first door lock to be included in the German police force's list of burglar-resistant product manufacturers.

SMOOTH TO USE
but hard to crack

**RC 2 SECURITY
WITH MINIMUM EFFORT**
Four security cams for
RC 2-capable doors

LOCKING
Hooks, bolts or security
cams possible

**VARIABLE LENGTH
END PIECE**
For double-leaf doors

How high and secure should it be?

With the Z-TS, you benefit from a modular system that allows you to implement any door height – simply and quickly from XS to XL, up to a height of 3,100 mm.

With faceplate modules, you can also implement your customers' individual security requirements simply and flexibly.
More details on page 23.

Handle-operated door locks

Other countries, other customs. Handle-operated door locks stand out with their versatile functions and customisation options. They set standards in security and design.

G-TS – Module lock

The G-TS, our bestseller, enables customised door heights of up to 3,100 mm and offers optimum flexibility with hooks, bolts or security cams.

G-TA – Automatic lock

The G-TA, the classic in the French market, combines automatic locking via the release rocker with manual locking using a key.

C-TS – Handle and switch operated lock

Specially developed for the UK market, the C-TS combines handle and switch actuation in one – without extra components.

LATCH

The G-TA triggers the locking mechanism when closing

MODULAR CUSTOMISATION

The G-TS can simply be adapted to different door heights

HANDLE AND ALTERNATE OPERATION

The C-TS combines handle and switch actuation thanks to the bolt handle

RC 2 SECURITY WITH MINIMAL EFFORT

4 security cams for RC 2-capable doors

The B-TV balcony door lock

With the B-TV balcony door lock, these and side entrance doors can also be conveniently operated from the outside. Locking is done with a key.

Easily fabricated: B-TV can be combined with MACO's Multi Matic hardware.

Our range Everything for your door

From locks to seals, thresholds and accessories – we make your doors complete and you stand out from the competition. Do you need something that is not in our range? Then, we will work with you to develop new solutions – perfectly tailored to your customers' needs.

Looks attract

Faceplates worth seeing

Faceplates are more than just cover trims. They give the door an appealing look and are available for various systems and profile geometries. Check out the illustrations. Our models from left to right are: the top hat, round end, flat, and U-faceplate.

The unique top-hat faceplate puts an attractive face on the locking mechanism, and is a fabricator's best friend. Why? It elegantly covers up any milling inaccuracies. These disappear behind the trapezoidal rebate leg and dirt build-up becomes a thing of the past. It's not just a pretty face. It also boosts security by adding more stability and even better results in burglar-resistance tests.

The surfaces

An overview

Tricoat-Evo

When it has to be robust

Extreme areas of application require extreme protection. Whether coastal climate or acidic woods – with Tricoat-Evo you have the right coating. Easy to use and particularly resistant to multiple influences.

Silverlook-Evo

Good protection as standard

At MACO, Silverlook-Evo is standard – with self-healing and self-lubricating. The coating with nanocapsules fills up small scratches, increases ease of use and makes hardware more durable and more resistant to corrosion.

Coating structure

Tricoat-Evo

Tribological sealing with nanocapsules (Evo)

Thick-layer passivation

Extremely strong duplex coating: up to 600 HV (hardness according to Vickers)

Steel or Zamak
