1.4	Choosing KOMO Quality = choosing certainty. Worldwide. _____	14

## 1 General information

### 1.1 Product information

In accordance with the manufacturer's liability for his products defined in the Product Liability Act (PHG in Austria, ProdHaftG in Germany, PrHG in Switzerland, Codice del Consumo in Italy), the following information must be heeded. Non-compliance shall release the manufacturer from this liability.

#### 1.1.1 Information on the product and its intended use

The MACO-WEATHERSEALS products range consists of:

- Window weatherseals
- Door weatherseals
- Accessories for window and door weatherseals
- Floor-door weatherseals
- Floor-door weatherseal accessories

#### Fields of application

More details on the types of correct applications are shown in the sections Material Characteristics, Weatherseal Characteristics, Processing methods for Weatherseals, Technical Characteristics of Sill Weatherseals in this MACO catalogue (see point 5 of this document)

#### 1.1.2 Important notes

- Special warnings
  - i. MACO-WEATHERSEALS are meant for professional use only.
  - ii. MACO accepts no liability for errors of execution, damage and defects resulting from an implementation, application or installation by non-specialised and non-qualified staff.

#### 1.1.3 Incorrect use

The recipients of the products supplied, or anyone who receives, uses, retails, resells etc. the product, without exception, are obliged to respect and comply with all the requirements and the provisions referred to in this information document and the documents here mentioned. All recipients, particularly those indicated in point 4 of this sheet are required to fulfil their obligation to provide information regarding the MACO products provided to the purchaser, installer or user. It is also necessary to draw attention to the operating instructions and to the use of the various elements concerning storage, correct use, transportation, application and handling of MACO products. In particular, potential damages that may occur due to an incorrect or improper use of MACO products should be indicated.

Improper use occurs when:

- a) The weatherseals come into contact with types of paints and/or surfaces whose characteristics and behavior are unknown (check the compatibility consulting the supplier before using)
- b) The directions for use contained in the assembly instructions are not respected.

- c) The necessary PPE (personal protective equipment such as goggles, gloves, masks, etc.) are not used during application as described in the safety data sheets.
- d) The indications regarding the range of application for each

#### 1.1.4 Information and education requirements- Description of target groups

The indications of this document are addressed to all recipients of the product or anyone who receives, uses, resells etc. the product, without exception. The following operators are indicated as an example and the aiming is not limited to them:

##### 1.1.4.1 Designers

include all companies/persons who design the construction of a building and together with it, the installation of doors and windows/systems, including materials and products of installation.

##### 1.1.4.2 Specialist retailers

include all companies/persons who purchase products from their respective manufacturers for resale without changing or processing the products.

##### 1.1.4.3 Window and doors /systems manufacturers

include all companies/persons who purchase and use semi-finished products from their suppliers and during additional steps of transformation in order to produce and then install windows and doors/systems.

##### 1.1.4.4 Retailers of building elements/ installation companies

"retailers of construction elements" include all companies/persons who purchase windows and doors/systems from their manufacturer and then resell and mount them in a construction project without any changes to the windows and doors/systems themselves.

"installation companies" include companies/people who purchase windows and doors/systems from their manufacturer or dealer of building elements in order to install them in a construction project without any changes to the windows and doors/systems themselves.

##### 1.1.4.5 Clients

include all companies/persons who require the construction of windows and door/systems to be installed in their construction project.

##### 1.1.4.6 End users/users

include all people who use windows and doors/systems, also called "users".

In order to fulfil the information obligations, education and use, in compliance with the code of consumption-Decree and in order to warrant faults and product defects, MACO GmbH makes

available to all recipients of the products the documentation mentioned in point 5 of this document, hereafter referred to as "Product information", whether full or partial documentation.

The recipients of the products are obliged to review and take note of all "Product information" referred in point 5, which must be respected and fulfilled strictly in order to ensure the proper use and correct functioning of the product.

#### 1.1.4.7 Examples:

- Designers are expected to request from windows and doors/systems' manufacturers or from MACO the current version of product information available (see point 5) and to observe the indications.
- Retailers are required to adhere to the current version of product information available (see point 5). Retailers are required to request from MACO and forward to windows and doors/systems' manufacturers or installation companies the technical data sheets, the assembly instructions, the instructions for use and maintenance.
- The Retailers of building elements/installation companies are required to comply with the product information available (see point 5), and to request from windows and doors/systems' manufacturers and to forward to Contractors/Clients and end users the instructions for use and maintenance, if required.

#### 1.1.5 Documentation available:

The following documentation contains binding provisions concerning the use of MACO-WEATHERSEALS products:

- I. Product catalogue
- II. Instructions for installation and use (if required)
- III. Product technical data sheets
- IV. Safety data sheets (if required)
- V. Instructions for use and maintenance (if required)

The current version of the above-mentioned documentation can be requested in paper format from MACO or downloaded from the download section on [www.maco.com](http://www.maco.com)

#### 1.1.6 Exclusion from liability

All indications and instructions contained in this document have been put together following the current rules and regulations based on the current state of the art, as well as on experience and acquired knowledge.

In order to ensure the safety and the suitability of the use of MACO-WEATHERSEALS, all instructions in the documentation (see points 2. and 5.) provided by MACO must be respected by the recipients of MACO-WEATHERSEALS. Failure to follow these instructions results in wrong use, as indicated in point 3., including the risk of extensive damage to things and people. If the operating instructions or the application examples were not available for a type of application different from MACO's indications or for a particular purpose required by the user, the manufacturer of the system is required to test the suitability for the intended use, or to request such review by a competent person.

MACO is exempt from its responsibility in the following cases:

- a) If the defect is due to a provision of law or an administrative requirement that the product had to comply with.
- b) If, based on the current state of the art at the time the product was put into circulation by the summoned, some characteristics of the product could not be recognized as a defect;
- c) If only one element or a semi-finished product has been produced by the summoned, and if the defect was originated during the construction phase of the product in which the element or the semi-finished product has been integrated, or if the defect occurred due to errors and/or unsuitable procedures put in place by the user/the applicator of the MACO-WEATHERSEALS products (see point 3.)

MACO accepts no liability for failures/performance, damages, due to a total or partial non-compliance with the points 2., 3., 5. and 6. (specifically 2. i, ii, iii, iv, 3. a-e, 5. I, II, III, IV, V, VI, 6.)

In such cases legal and contractual warranties will be excluded, as well as any liability for damages due to defective product.

## 1.2 Material characteristics

### 1.2.1 Important information

#### Installation

When handling/installing weatherseal profiles into the frame, do not allow them to come into contact with dirty or dusty surfaces, such as unclean gloves or hands.

#### Servicing the weatherseals

MACO weatherseals have no particular maintenance requirements in normal use in the frame. The product should be checked and replaced only by a professionally qualified technician. The use of a weatherseal which does not fit the interior of the frame can result in poor performance (poor weatherseal and comfort of the window or door).

#### Cleaning

Clean the surface of the weatherseal with a soft cloth dampened with warm water. Do not use a microfibre cloth.

- Do not use detergents.
- Do not use solvents.
- Do not rub the gasket repeatedly and with strong pressure.

#### Lubrication

To facilitate insertion of the weatherseal into its groove, use talcum powder or potato starch (especially silicone weatherseals). This lubricates surfaces which are subject to friction when the door/window is opened and closed. If the weatherseal requires additional lubrication after having been in use for a long time, dust the surface of the weatherseal with talcum powder or potato starch with a pad when it is completely dry.

#### Improper use

Always use the handle to open or close a window. Handling it in any other way, for instance holding the frame with your hands, may damage the window's weatherseals.

### 1.2.2 MACO weatherseal materials

#### COMPACT THERMOPLASTIC WEATHERSEALS (PC)

In soft vinyl thermoplastic, mono-extruded and co-extruded.

- Good tolerance absorption
- Temperature range: -10/+70 °C
- Not suitable with water-based paints
- Good ozone and UV resistance

#### COMPACT TPE WEATHERSEALS (TC)

In mono-extruded and co-extruded thermoplastic elastomer.

- Excellent tolerance absorption
- Excellent spring-back
- Temperature range: -40/+120 °C
- Compatible with water- and solvent-based coatings
- The corners can be cut at 45° or welded
- Excellent ozone and UV resistance
- Can be extruded with thin panels, for maximum comfort and minimum closing effort

#### EXPANDED THERMOPLASTIC ELASTOMER WEATHERSEALS (TE)

In thermoplastic co-extruded and tri-extruded elastomer, with parts in expanded material.

- Excellent tolerance absorption
- Excellent spring-back
- Temperature range: -40/+120 °C
- Compatible with water- and solvent-based coatings
- The corners can be cut at 45° or welded
- Excellent ozone and UV resistance

- Functional parts in foam material, for comfortable and soft compression

#### COMPACT SILICONE WEATHERSEALS (SC)

In cured silicone, mono-extruded or co-extruded.

- High tolerance absorption
- Better spring-back in adverse weather conditions
- Temperature range: -40/+200 °C
- Excellent compatibility with water- and solvent-based coatings
- Corners can be joined by cutting at 45° or 90° - in special cases, cold vulcanisation is an option (Splicen)
- Excellent ozone and UV resistance
- High performance for excellent closing comfort

#### EXPANDED SILICONE WEATHERSEALS (SE)

In co-extruded cured silicone, with parts in expanded material.

- High tolerance absorption
- Better spring-back in adverse weather conditions
- Temperature range: -40/+200 °C
- Excellent compatibility with water- and solvent-based coatings
- The corners can be cut at 45° or 90°
- Excellent ozone and UV resistance
- Functional section in expanded material for improved closing comfort

#### EPDM WEATHERSEALS (EE, EC)

In cured EPDM, mono-extruded or co-extruded, with a compact EPDM profile (EC) or with parts in foam material (EE).

- Excellent tolerance absorption

- Excellent spring-back in the temperature range: -40/+120 °C
- Good compatibility with water- and solvent-based coatings
- The corners can be cut at 45° or 90°
- Excellent ozone and UV resistance (black colour only)
- (EE) Functional parts in foam material, for comfortable and soft compression

### 1.2.3 MACO weatherseal colours

signal black

graphite grey

window grey

light grey

traffic white

beige

sepia brown

The colours are for guidance only: the reproduction on paper may differ from the original weatherseal colours.

Attention: The variety of the colour range does not automatically imply that each profile will be available in these colors.

### 1.3 Characteristics of MACO weatherseals

The weatherseals are generally made of a compact material in a range of Shore hardnesses. An extrusion made with a single hardness material is called a mono-extrusion. If it has two different hardnesses, it is called a compact co-extrusion. If a section of expanded material is united to the compact material, this is generally called a tri-extrusion.

The expanded section has a special structure which gives a very soft effect in compression. Specially design geometries, combined with very soft functional sections and optimised spring-back, give an excellent thermal and acoustic weatherseal. The overall quality of the profile depends on the geometry of the extruded materials and their specific combination, which are designed to yield an excellent weatherseal and comfort in use.

#### 1.3.1 Characteristics of MACO weatherseals in TC compact thermoplastic elastomer

Mono- and co-extruded thermoplastic elastomer (TPE) weatherseals are generally suited to both simple and complex geometries, even with very thin walls which provide a soft and therefore excellent weatherseal. TC weatherseals are resistant

to ozone and UV and maintain their physical and mechanical characteristics in the temperature range  $-40^{\circ}\text{C}/+120^{\circ}\text{C}$ .

TPE stands out for the fact that not only can the corners be processed in the normal way by cutting them, they can also be welded.

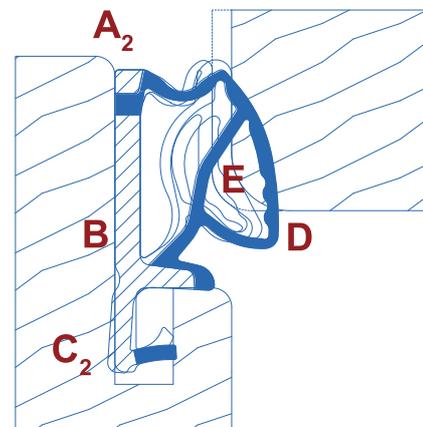

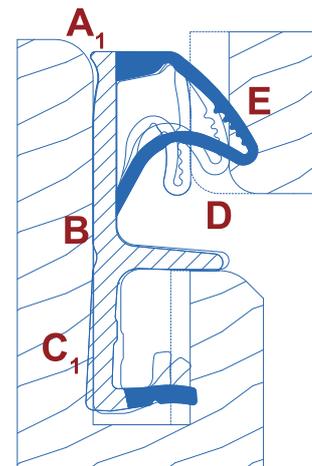

**A - Simple processing**, by the use of a hard back ( $_1$ ) and the integration of a barrier of elongation ( $_2$ ), the weatherseal can be clipped easily.

**B - Facilitated installation** thanks to the rigid back, which also counteracts overstretching of the weatherseal when inserted into the groove.

**C - Sealing foot**, specially developed for universal ( $_1$ ) or nominal dimensions ( $_2$ ), ensures excellent hold in the groove and easy installation.

**D - High performance through synergy: Weatherseal Fitting Threshold.** Thanks to the specially developed weatherseal for optimum contact with the stop, taking into account the fitting and other window accessories, the weatherseal offers a high tolerance in effective effective range, and in some cases follows the stop contour.

**E - ease of use.** The choice of materials and their combination, the design of the weatherseal shape with low wall thickness and the inserted break points allow a comfortable closing without sacrificing the insulating performance.

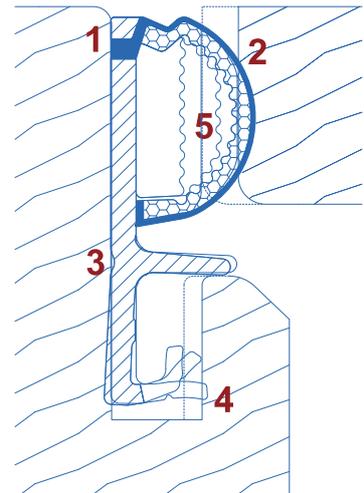

### 1.3.2 Characteristics of MACO weatherseals in TE expanded thermoplastic elastomer

Co- and tri-extruded thermoplastic elastomer (TPE) weatherseals are generally suited to both simple and complex geometries, with functional sections in expanded material which provides a soft and therefore excellent weatherseal. TE weatherseals are resistant to UV and maintain their physical and mechanical characteristics in the temperature range  $-40^{\circ}\text{C}/+120^{\circ}\text{C}$ . TPE stands out for the fact that not only can the corners be processed in the normal way by cutting them, they can also be welded.

Co- and tri-extruded thermoplastic elastomer (TPE) weatherseals are generally suited to both simple and complex geometries, with functional sections in expanded material which

provides a soft and therefore excellent weatherseal. The TE weatherseal range is made with an extrusion of three different physical forms of TPE, known as a tri-extrusion. They have a **structural section** with a particularly high Shore hardness, a **functional section** made in very soft closed cell expanded material, and a **section which is functional and protective**, with a medium/soft Shore hardness. TE weatherseals are resistant to UV and maintain their physical and mechanical characteristics in the temperature range  $-40^{\circ}\text{C}/+120^{\circ}\text{C}$ . TPE stands out for the fact that not only can the corners be processed in the normal way by cutting them, they can also be welded.

- 1 Overstretch protection - stabilizing area
- 2 Steath - protective layer
- 3 Rigid full material - stabilizing area
- 4 Soft full material - functional area
- 5 Expanded material (foam) - functional area

### 1.3.3 Characteristics of MACO weatherseals in SC compact or SE expanded vulcanised silicone

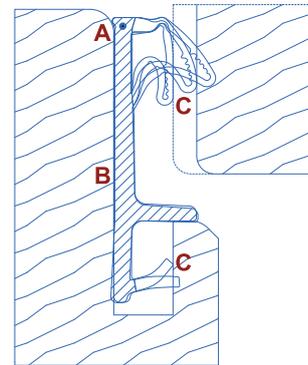

Mono-extruded vulcanised silicone weatherseals are suited for both simple and complex geometrical forms, and offer a soft and effective weatherseal. MACO SC weatherseals are also available in a co-extruded version, with a more rigid back which facilitates insertion into the groove. Given the high elasticity of the material, a robust, thin wire may be co-extruded with it to prevent it stretching or breaking during insertion. To facilitate processing and insertion into the groove, MACO SC weather-

seals are mostly given a surface dusting of talcum powder. SC weatherseals are ozone and UV resistant, and maintain their physical and mechanical characteristics in the temperature range  $-40^{\circ}\text{C}/+200^{\circ}\text{C}$ . Vulcanised silicone stands out for its excellent spring-back, high resistance to extreme temperatures and a long service life. Vulcanised silicone weatherseals are our top of the range product. MACO silicone weatherseals can also be extruded with sections in expanded material (SE)

**A - Robust** and durable thread protects against overstretching in the installation phase of the weatherseals. In addition, it serves as an indicator for a correct processing of latched profiles.

**B - Facilitated installation** thanks to the rigid back, which also counteracts overstretching of the seal when inserted into the groove. In addition, the hard back has a stabilizing effect on the head geometry.

**C - Synergy weatherseal, fitting, threshold.** The combination of the special properties of the soft and elastic silicone material with the selection of a suitable geometry, taking into account possible fitting parts and installation situations results in profiles with increased tolerance absorption while maintaining a firm hold in the groove.

#### 1.3.4 Characteristics of MACO weatherseals in EC compact or EE expanded EPDM

Vulcanised EPDM, in the version with an expanded functional section, has outstanding spring-back in its intended temperature range. Co-extruded vulcanised EPDM weatherseals are generally best suited to very simple, rounded geometries, with rather thick walls. The expanded section provides an exceptionally soft weatherseal, whether solid or with a hollow geometry. MACO EE weatherseals are the only ones in our range to be mainly available in black, especially as regards their compact/

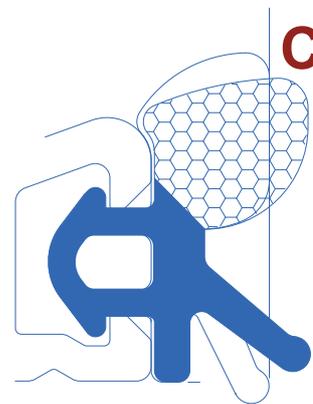

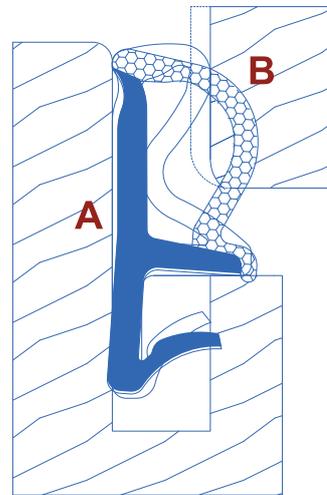

rigid component. The expanded functional section may also be coloured, so long as the weatherseal is not constantly exposed to UV.

**If they are to be largely exposed to UV, we can recommend only the black colour.** EE weatherseals maintain their physical and mechanical characteristics in the temperature range -40°C/+120°C and offer excellent spring-back.

**A - Facilitated installation** thanks to the rigid back, which also counteracts overstretching of the weatherseal when inserted into the groove.

**B - Excellent softness** when touched. Thanks to the special properties of EPDM, the expanded area (foam) needs no additional protective coating on the surface. This allows the expanded area to compress particularly well.

**C - Full profile** with guaranteed softness. The expanded area also offers special softness and excellent elasticity under all conditions, even in cavity-free seal shapes.

## 1.4 Choosing KOMO Quality = choosing certainty. Worldwide.

KOMO guarantees that the quality has been objectively tested by independent experts. On the basis of predetermined, generally accepted requirements.

### KOMO Quality Mark: international guarantee since 1962

Every product for a building or infrastructure sector that is provided under KOMO certification meets very strict quality requirements\*. Only when accredited, independent certification institutions repeatedly confirm that it meets all requirements is such a product permitted to carry the KOMO Quality Mark.

The stringent, internationally valid and maintained rules concerning KOMO certification schemes determine the added value of products\*\* that come with a KOMO Quality Mark. That's why KOMO quality always provides certainty. Worldwide.

*(\*) Requirements for KOMO certification are drawn up in advance by special Committees of Experts, in which all interested parties are represented. The requirements are described in an Assessment Directive (Dutch: BRL).*

*(\*\*) Besides the benefits for products (all building and infrastructure products, raw and auxiliary materials), KOMO certification also creates additional value for building processes, building systems, realization processes, services, management systems and innovations in the building and infrastructure sector.*

### The KOMO Quality Mark shows objectively tested quality

The KOMO Quality Mark is everything that the CE marking is not. And vice versa. So KOMO and CE complement each other perfectly. CE acts as a kind of passport through which a product is allowed to be placed on the market in the European Union and associated countries. And with the KOMO Quality Mark you convince buyers through the proof of objectively determined quality obtained from repeated tests. Worldwide.

### The KOMO promise in 48 countries

Every KOMO certified product meets all of the high standards of quality required by the legislation and regulations applicable in the Netherlands within the building and infrastructure sector, these being the Dutch Building Decree plus all international regulations that apply in the Netherlands (and in most other EU countries);

As a result, products with a KOMO Quality Mark achieve a quality level that is internationally recognized and acknowledged and that offers certainty to buyers;

The KOMO Quality Mark is carried in 48 countries throughout the world, on almost all continents and in the most diverse pro-

duct ranges of the building and infrastructure sector, because there is a demand for an objective, universal quality standard everywhere — even if this does not officially match the legislation currently in force at the location.

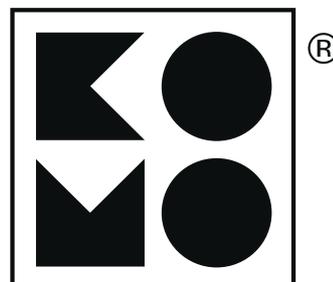

You find KOMO certificate holders worldwide in some 48 countries. They are ambitious companies that invest in objectively determined quality. In the quality of their KOMO certified product(s) and at the same time, in their internal quality control. This way they can always supply the very best for building and infrastructure. In everyone's interest.

There are approximately 4.300 KOMO certificate holders in Austria, Belarus, Belgium, Bosnia, Brazil, Cameroon, Chile, China, Colombia, Costa Rica, Czech Republic, Denmark, Estonia, Finland, France, Gabon, Germany, Great Britain, Greece, Hungary, Ireland, India, Indonesia, Iran, Israel, Italy, Latvia, Liechtenstein, Luxembourg, Malaysia, Morocco, the Netherlands, Norway, Peru, Poland, Russia, Serbia, Singapore, Slovakia, Suriname, Sweden, Switzerland, Taiwan, Thailand, Turkey, Ukraine, United States and Vietnam.

### For producers of raw materials and materials for buildings and infrastructures:

Do you produce one or more raw materials and/or materials for the building industry and infrastructure sector under KOMO certification? In that case, you actively distinguish yourself from other suppliers by maintaining the highest quality standards. This way your products immediately acquire a preferential position within the market for building and infrastructure projects in the Netherlands (it complies with the legislation and regulations applicable in the Netherlands and with all requirements of professional market parties).

Outside the Netherlands, KOMO certification plays a major role as important, internationally valued designation. In addition to a decisive competitive advantage in relation to Dutch buyers, with the KOMO Quality Mark you also acquire a profiling tool for other markets.

## **2 Information about processing**

---

### **2.1 MACO weatherseal solution for the central node - double side hung window \_\_\_\_\_ 16**

## 2 Information about processing

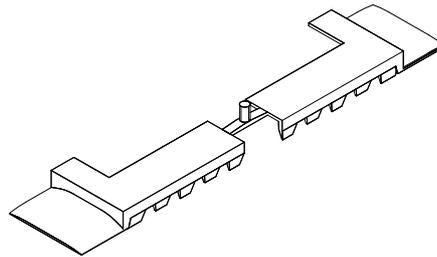

### 2.1 MACO weatherseal solution for the central node - double side hung window

#### Universal end pieces

- The universal end pieces may be used in the central node for central weatherseals on the window/door or the frame. They can also be applied to weatherseals without a special fitting for the foot.
- This absolute independence from the geometry of the weatherseal itself makes them a unique product, suited for grooves from 4 to 5 mm and 3 mm.
- They can be used on central weatherseals with a stop depth of 11 to 12 mm, and width of 12 mm and 19 mm. No adhesive is required.
- Products with both an RH and LH piece (pair of end pieces) have a single article code.

- The universal end pieces are made in TPE and in all the colours of the MACO ADAPTA range.

**The groove must be routed 1 mm deeper at the point of installation of the universal end piece.**

For double side hung windows, the points at greatest risk of water or air getting through are between the central upright of the second panel and the top and bottom cross members (the figure shows a detailed view of the top member)

Insert the end piece and MACO weatherseal into the groove

Position the end piece properly

The end piece now covers the gap between the central upright of the second window and the top and bottom cross members (the figure shows a detailed view of the top member)

## 5.5 Floor-door weatherseals

### 5.5.1 Information on product safety and product liability about the floor-door weatherseals

In accordance with the manufacturer's liability for his products defined in the Product Liability Act (PHG in Austria, ProdHaftG in Germany, PrHG in Switzerland, Codice del Consumo in Italy), the following information must be heeded. Non-compliance shall release the manufacturer from this liability.

#### 5.5.1.1 Information on the product and its intended use

Maco offers the following Floor-door weatherseals:

Smoke and sound protection; Mini, Self adjusting and Floor-door weatherseals for glass doors

#### Product features

Sealing systems used horizontally at the bottom of the door sash in order to close the gap between door and floor. By activating the up-and-down mechanism the weatherseal expands downwards preventing air draft and reducing noise as well as dust infiltration.

#### Application range

Entrance doors of different materials (Timber; PVC; metal), interior doors and glass doors

#### 5.5.1.2 Important notes

Special notes

- i. Floor-door weatherseals are delivered in fixed lengths which can be shortened to the extent specified in the attached product data sheets. The reduction length is sufficient in order to reach the nearest smaller fixed length. The indicated reduction length must not be exceeded.
- ii. The attached product data sheet indicates the maximum lift of the floor-door weatherseals which must not be exceeded. Failure to do so may result in damaging the mechanism and thereby compromising the faultless functionality.
- iii. It is indispensable to observe the adjustment indications for every model contained in the assembly instructions in order to guarantee the correct application and to achieve the maximum performance. Incorrect installation or adjustment will result in limited performance of the floor-door weatherseals.
- iv. It is especially important to carefully choose the right floor-door weatherseal based on its properties and application range. It is recommended to always ask for professional advice of a specialist regarding the application range.

#### 5.5.1.3 Abnormal handling and incorrect use

The recipients of the delivered goods, e.g. whoever installs, resells or uses them is obliged without exceptions to follow and apply all instructions and rules of the present information sheet.

All recipients, especially those mentioned under point 4 are obliged to inform the buyer/producer/user. In addition, it is necessary to direct the attention to the user guide and the assembly instructions.

It is advisable to highlight the risks and damages resulting from incorrect or inappropriate use of the floor-door weatherseals. An incorrect use exists when

- a) the assembly and manufacturing instructions attached to the product are not being taken into consideration
- b) The indications regarding storage and transportation are not being taken into consideration
- c) a product is being used outside of its application range or incorrectly installed
- d) the complete weatherseal or parts of it are arbitrarily cut or modified, except for modifications that follow the attached assembly and manufacturing instructions.

#### 5.5.1.4 Information and education requirements-

##### Description of target groups

The indications of this document are addressed to all recipients of the product or anyone who receives, uses, resells etc. the product, without exception. The following operators are indicated as an example and the aiming is not limited to them:

##### 5.5.1.4.1 Designers

includes all companies or persons who plan the construction of a building and therefore the installation of windows/doors/systems, floor-door weatherseal systems including installation components and products.

##### 5.5.1.4.2 Specialist retailers

includes all companies/persons who purchase products from their respective manufacturers for resale without changing or processing the products.

##### 5.5.1.4.3 Manufacturers of window and door elements and systems

includes all companies/persons who purchase semi-finished products from their respective manufacturers and apply additional adaptations with the scope to subsequently fabricate and install window and door elements and systems which include floor-door weatherseals.

##### 5.5.1.4.4 Retailers of building products/installation companies

"retailers of building products" include all companies/persons who purchase windows and doors systems from the respective manufacturer and then resell and install them in a construction project without any changes to the windows/doors systems themselves.

"Installation companies" include all companies/persons who purchase windows and doors systems from their manufacturer or building product retailer in order to install them in a construction project without any changes to the window/door systems themselves.

#### 5.5.1.4.5 Clients

include all companies/persons who require the construction of windows/door/systems to be installed in their construction project.

#### 5.5.1.4.6 End users/users

include all people who use windows/doors/systems, also called "users".

Examples:

Beispiele:

- Designers are advised to ask the fabricators of window and door systems or MACO for the most updated available product information and to follow the instructions herein contained.
- Specialised retailers are advised to follow the most updated available product information (see point 5) and to ask MACO for technical data sheets, installation instructions, instructions for use and maintenance and to forward those to fabricators or installers of window and door systems.
- Retailers of building products/resellers/installation companies are advised to follow the relevant most updated available product information (see point 5) and to forward them when indicated to their clients and end users.

#### 5.5.1.5 Available documentation that needs to be observed:

The following documentation contains binding provisions regarding the use and application of floor-door weatherseals.

- I. Product catalogue
- II. Instructions for installation and use included in the product packaging
- III. Instructions for use/storage/safety (when indicated)
- IV. Safety data sheets (if required)
- V. Technical product data sheets

The current version of the above-mentioned documentation can be requested in paper format from MACO or downloaded from the download section on [www.maco.com](http://www.maco.com)

#### 5.5.1.6 Storage indications

- i. Do not overload packaging

- ii. store products horizontally
- iii. store products in safe distance from open flames or sources of heat
- iv. store products in their original packaging, even after packaging has been opened
- v. Take into account storage temperature (when indicated)
- vi. Do not bend the floor-door weatherseals or their packaging

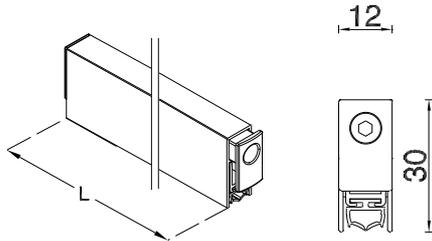

#### 5.5.1.7 Liability exclusion

All indications and instructions contained in this document have been put together following the current rules and regulations based on the current state of the art, as well as on experience and acquired knowledge.

In order to ensure safety and appropriate use of systems for MACO floor-door weatherseals it is necessary to follow all indications contained in the documentation provided by MACO (see points 2 and 5). Not following these indications results in inappropriate use (as described in point 3) including the risk of damage to persons and property. If there are no instructions for use or application for an application not in accordance with MACO indications or for a special application required by the user the fabricator of the system is required to check the accordance with the directions of use of the product or to require such an assessment to a competent specialist. MACO is also excluded from any liability in the following circumstances:

- a) when the defect is based on a legal of administrative provision which the product is bound to comply with.
- b) when at the moment of the introduction of the product in the market and on the basis of the prevailing technical principles some characteristics of the product where not known to be defects.
- c) when the defendant has produced only one element or a semifinished product and the defect has occurred during the construction phase of the product which integrates the element or semifinished product or when the defect results from mistakes and/or from improper procedures adopted by the producer of the systems for the assembly of MACO floor-door weatherseals.

MACO does not assume any liability for defects of operation or performance as well as damages resulting from complete or partial non-compliance of points 2, 3, 5 and 6 (in particular 2.i, ii, iii, iv,, 3.a-d, 5. I,II,III,IV,V, 6. i, ii, iii, iv, v, vi.)
