Integration Guide - Somfy TaHoma Box

› Install the TaHoma App (TaHoma web, TaHoma iPad, TaHoma Android, TaHoma Installer App). The version of the Somfy TaHoma Box used must be 2020.6.4-15, it is better to always use the latest version.

› Visit Somfy's website and click on **"Somfy.connect"**.

› Run the activation and then log in.

› Plug the EnOcean dongle into the TaHoma box.
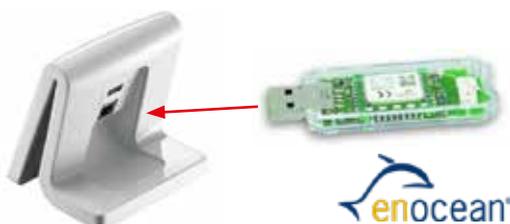

› Click ▤ and select **"System Settings"**.
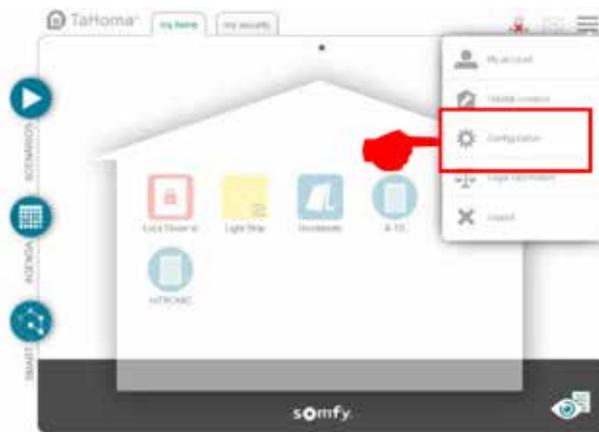

› Click on the **"Add"** box in the **"EnOcean"** tab.
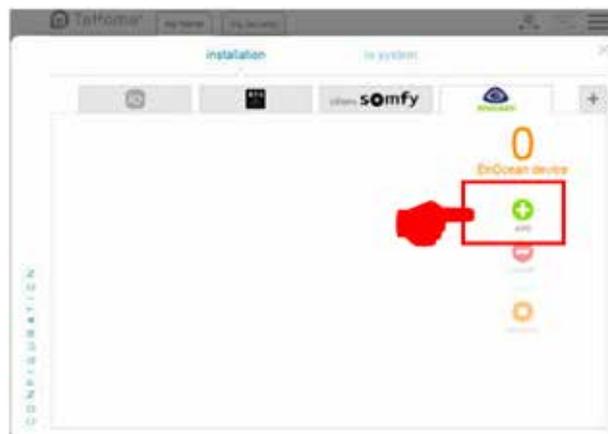

› Scroll to the **"Sensors"** page using the side arrows, select and confirm with **"OK"**.

› Scroll to the **"mTronic"** (also for the eTronic sensor!) page using the side arrows, select and confirm with **"OK"**. The TaHoma Box now waits 120 seconds for a signal from the sensor.
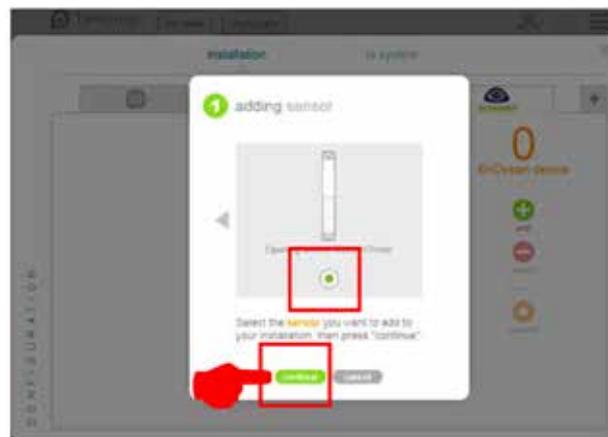

› Teach the sensor (as per instructions = magnet via reed contact resp. 3 times briefly press), the detection of the sensor will be confirmed.
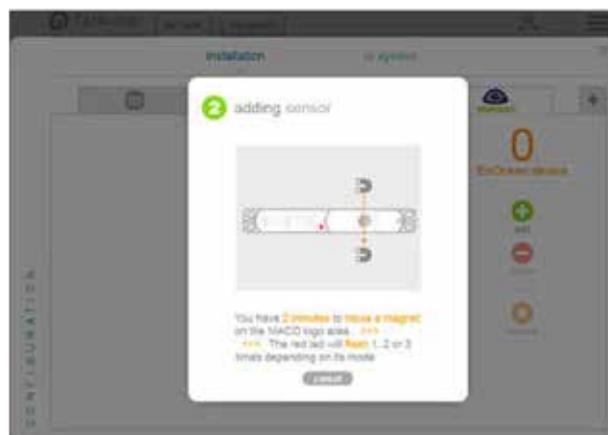

› Select the desired sensor mode and then confirm it with **"continue"**.
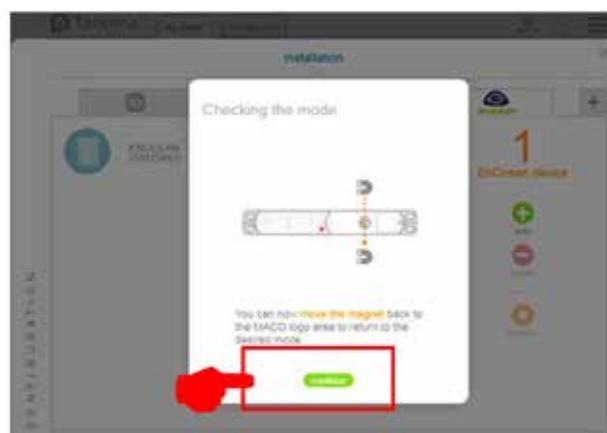

› Enter name of sensor and confirm with **"OK"**.
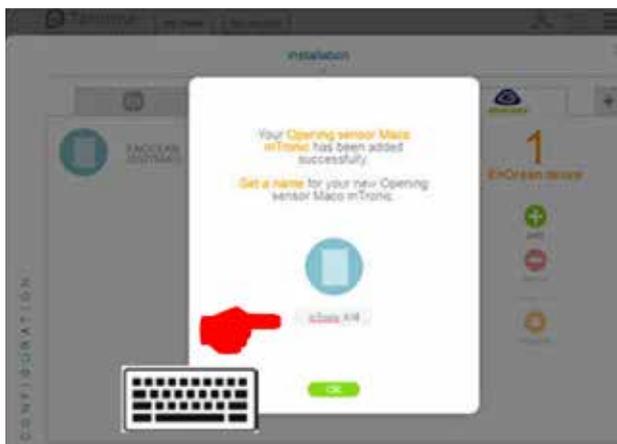

› Sensor with name is displayed.

› Check the sensor by operating the window. If status messages are incorrect, check the mode set or the installation position of the sensor.
