Important Information

Introduction

Read these instructions carefully before starting the A-TS assembly. Mount all hardware parts professionally as described in this manual and observe all safety instructions. Failure to follow these instructions cannot guarantee the proper functioning of the system. In the event of non-compliance, we assume no liability for damage to persons or material.

Match the required fixing material with the building structure and the corresponding load and expand on it if necessary. Any supplied fixing material only meets a part of the requirements.

Target audience for this guide

This documentation is intended exclusively for specialist companies and certified specialists. The work-steps described herein may only be carried out by certified specialists.

Retention of documents / briefing

Retain these assembly instructions for later use and maintenance.

Hand over the user manual (downloadable under maco.eu - Order No. 757585) to the end user and ensure they are briefed.

Installation and operation

Before installation - test doors and safety elements. The integrity and smoothness of the doors must be ensured.

All work (assembly, adjustment, etc.) must be carried out in a powered-down state.

Before installing the drive motor, the current temperature range must be checked for environment suitability.

To fix the hardware, use sufficiently long screws which must extend into the steel reinforcement when using PVC profiles.

Unless otherwise indicated, all measurements are made in millimetres.

All diagrams are only symbolic.

Printing errors, mistakes and changes are reserved.

Declaration of conformity can be found at:

EC declaration of incorporation Motor A-TS

Important Information

Informative note

This indicates important additional information that is important for the error-free assembly of the product.

Important Information

Intended use

- › The A-TS is intended to be installed in vertical front doors, apartment doors and side doors made of PVC, timber, aluminium or steel and combinations thereof.
- › Mount all hardware parts professionally as described in this manual and observe all safety instructions.
- › In order to avoid errors in the electronics due to damaged cables, all milling/drilling in the area of the cable routing must be carefully deburred!
- › Installation and electrical installations must be carried out in accordance with these instructions. Incorrect wiring can lead to the destruction of the electronics.
- › When screwing in, make sure that the cables are not damaged by the fastening screws!
- › Before installation, ensure that all components are in perfect condition - damaged or faulty components must not be used under any circumstances. Use A-TS only in a perfect condition.
- › Power to the power supply must be switched off before all work on the A-TS and the voltage-carrying components is performed.

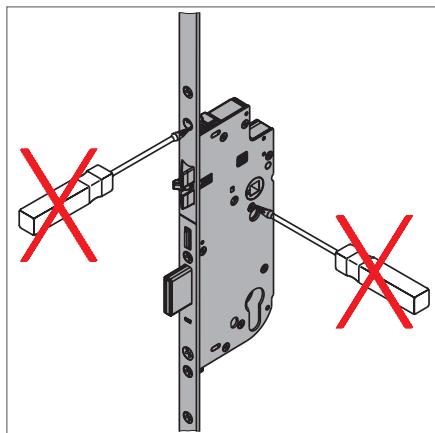

Improper use

- › The M-TS must NOT be used for escape or panic doors according to EN179 or EN1125.
- › The hardware parts described in this guide are made of stainless steel or galvanised passivated steel and sealed in accordance with DIN EN 12329. They must not be used in environments with aggressive, corrosive air content.
- › Do not use acid-curing sealants, as these can lead to corrosion of the hardware parts.

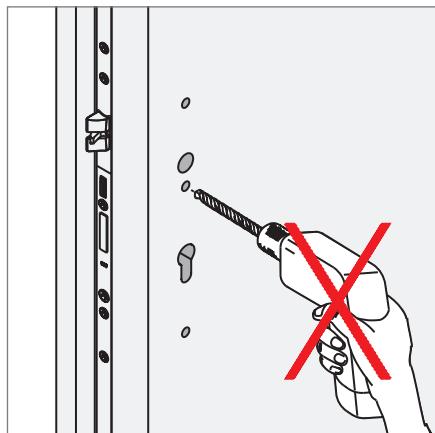

Improper assembly, misuse or unusual use, the use of system accessories not expressly approved by MACO, or modifications or repair work not expressly approved by MACO may lead to malfunctions and must be avoided. Any measures not expressly permitted by MACO shall result in the loss of all liability, warranty and, if necessary, separately agreed warranty claims.

Important Information

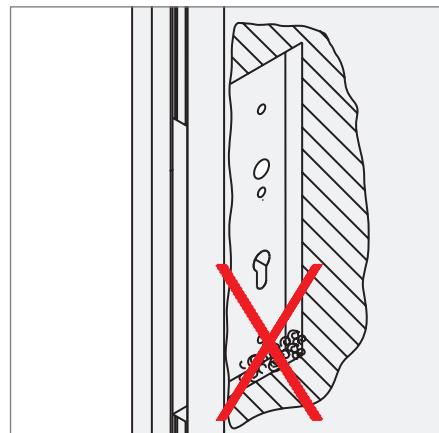

Improper use

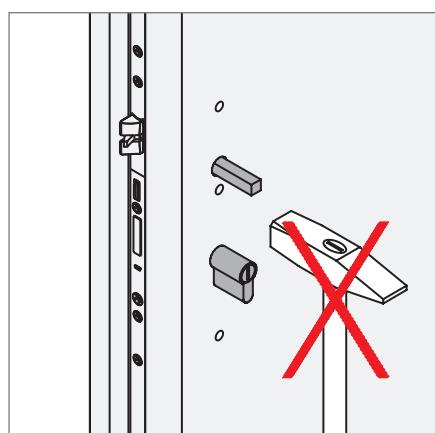

Never open the lock case!

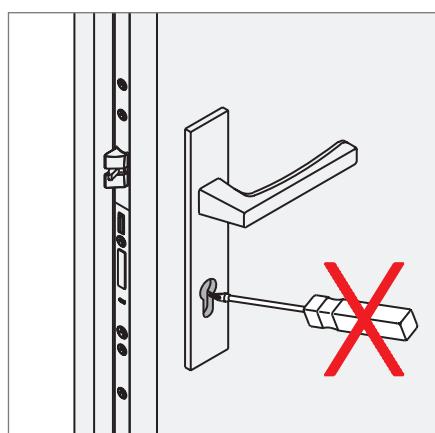

Drill all holes before installation of the lock.

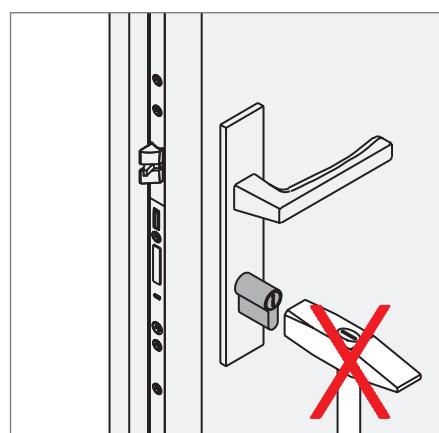

Remove swarf from the routing pockets!

Do not force the handle pin through the lock nut!

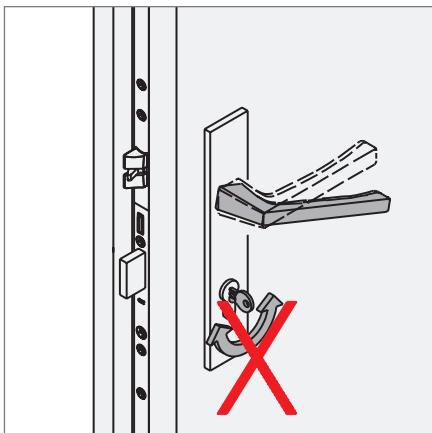

Only close the lock with the corresponding operating key!

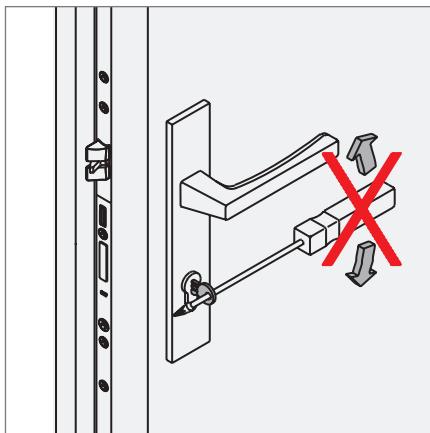

Do not use force during the cylinder assembly!

Important Information

Improper use

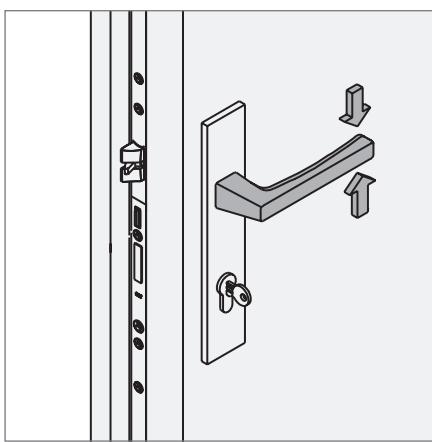

Do not simultaneously press the key and handle!

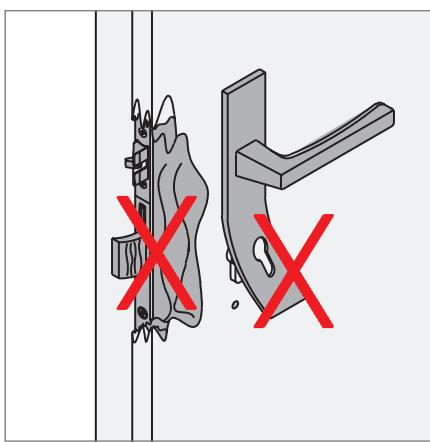

Do not turn the key using force!

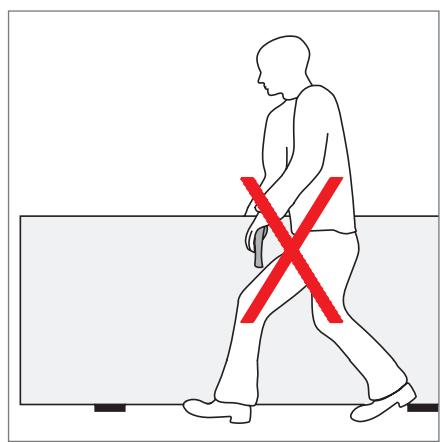

The latch of the main lock must not rub against the striker plate – this also applies to multi-point locks without door acceleration, and all latches of the side locks. For this, use the adjustment option on the striker plates and door hinges. Adjustment of the holes in the striker plates is not permitted.

Only apply load to the handle in the normal direction! Apply a maximum force of 15 kg in the direction of actuation (on the handle).

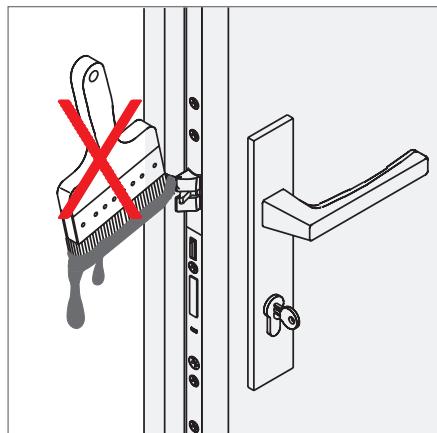

The multi-point lock must be replaced as soon as traces of use of force are visible!

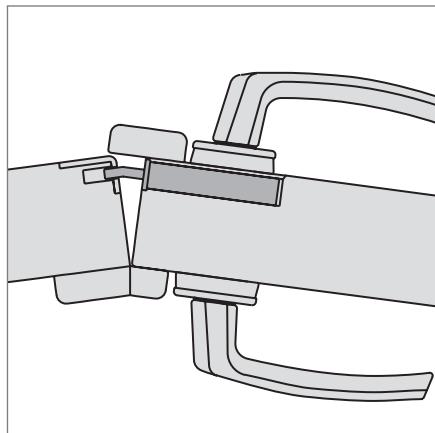

Do not carry the door leaf with the handle!

Important Information

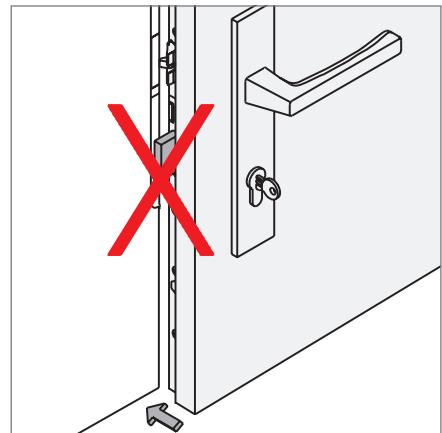

Improper use

Do not paint or varnish over the shootbolt or latch!

Double-sash doors must not be forced over the inactive leaf!

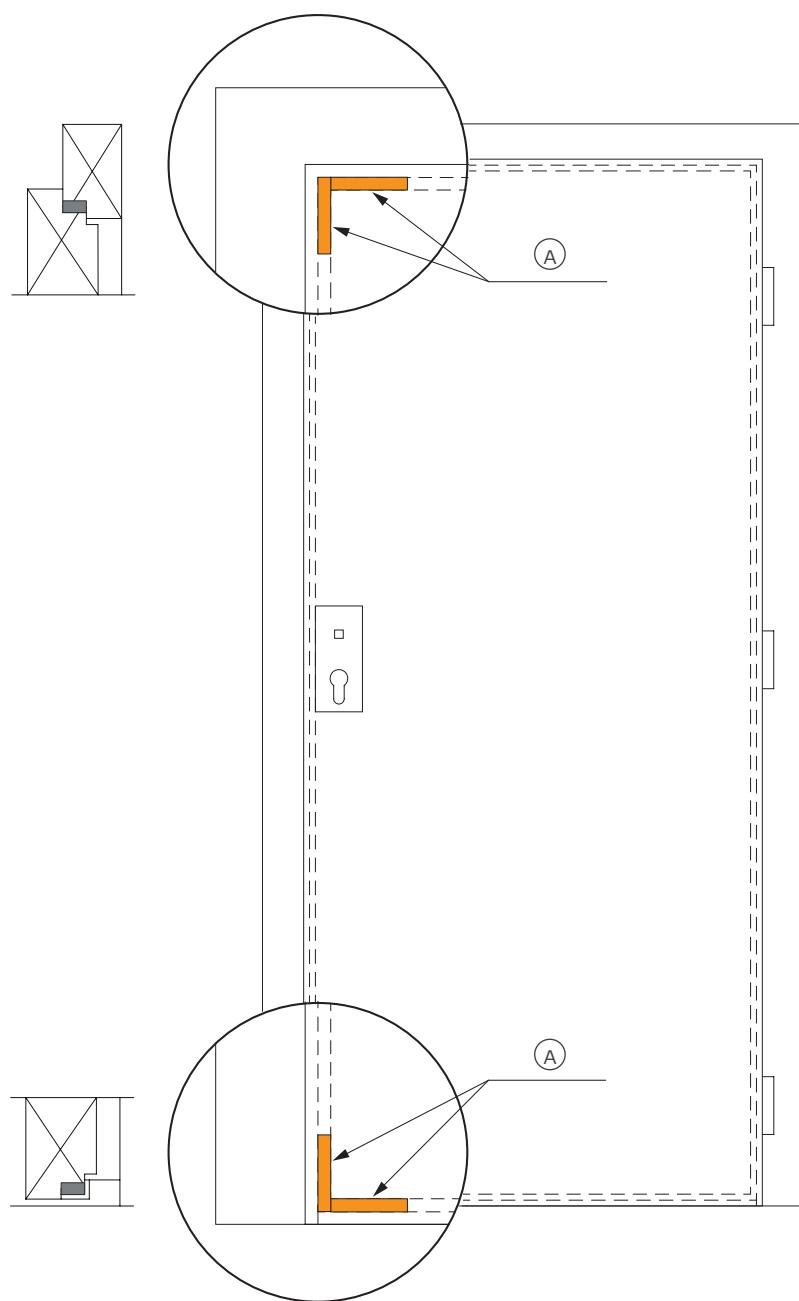

Do not lock the lock bar when the door is open!

Important Information

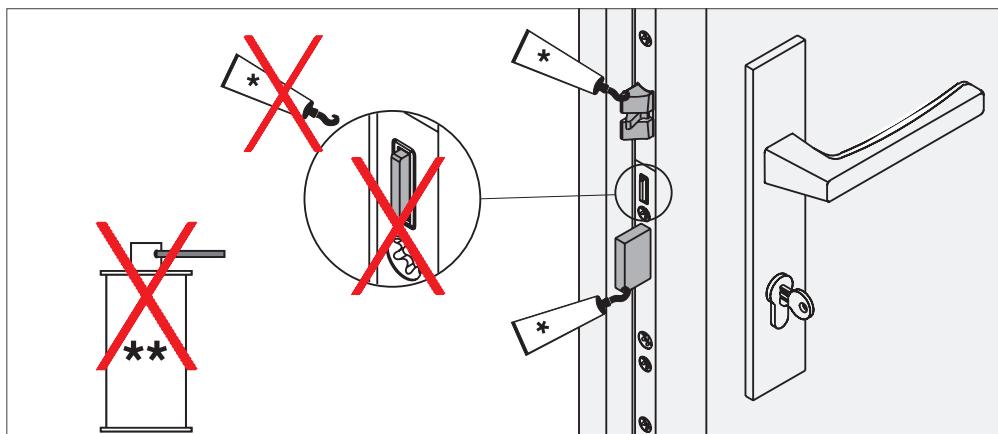

Use of transportation protection devices

Simple transport protection devices, wedges or blocks ensure a safe transport of the entire door element. Remove only after installation.

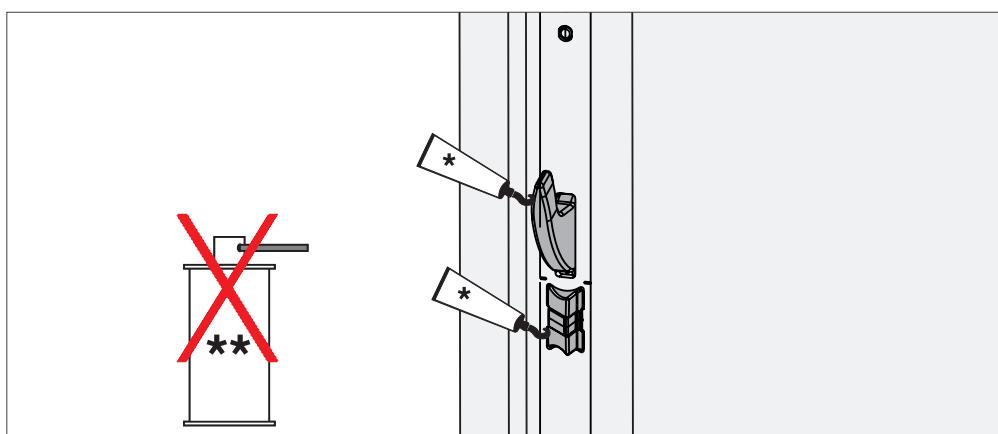

Ⓐ Transport protection device position

Maintenance

The door lock (lock case) is delivered with an intensive lubrication of high performance greases and must NOT be re-lubricated! Lubricate the latch and locking bolt 1x annually!

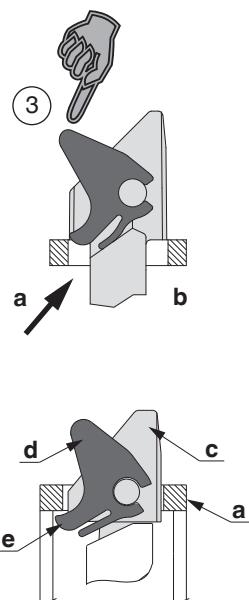

Lubricate the MF-HO locking element 1x annually!

Do not use any lubricating oils, rust remover, silicone sprays etc!
Lubricate only with grease or technical petroleum jelly!

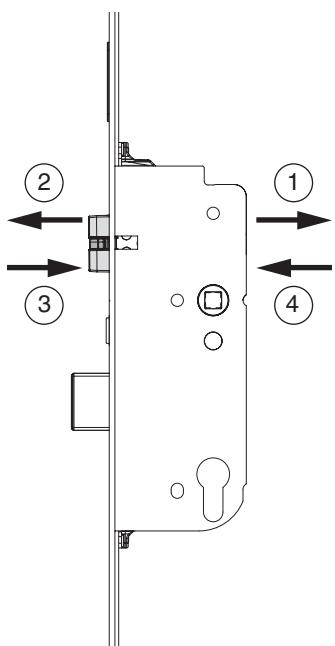

* Spray grease (455341), ** Rust remover

Latch adjustment

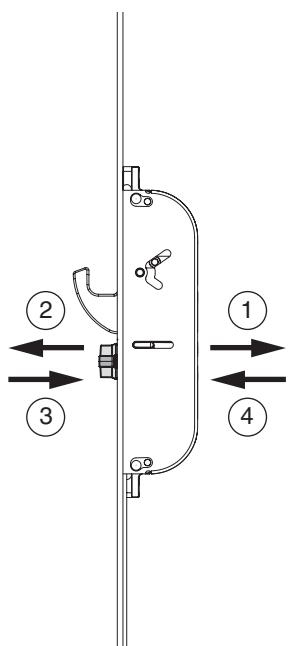

- a** = Faceplate
- b** = Faceplate recess
- c** = Latch
- d** = Latch insert
- e** = Insert leg

Crank latch

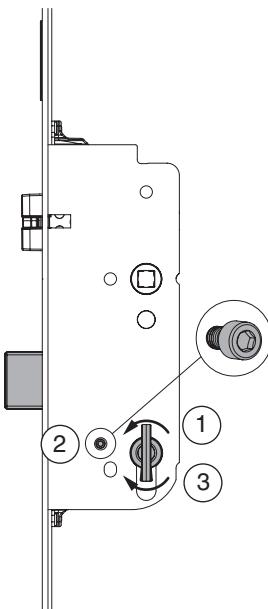

Multi-function latch

Perform functional check!

Installation Instructions

Set lock for day release function (assembler)

Set day release function

- ① Lock
- ② Remove the day release screw
(2.5 mm hex socket)
- ③ Unlock

Manufacture delivery state

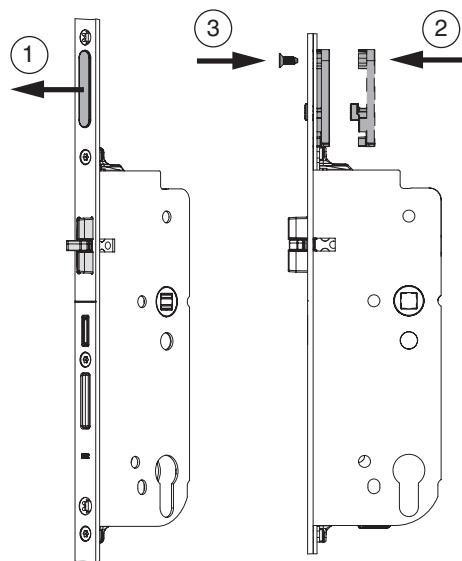

- ① Lock
- ② Insert day release screw
(2.5 mm hex socket)
- ③ Unlock

If the day release function is set, the main latch is not actuated during motorised operation (door does not automatically jump open)!

Installation Instructions

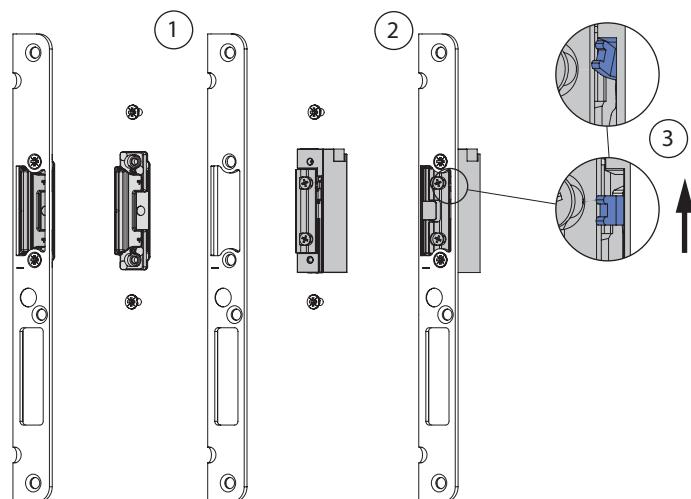

Day release element assembly on the lock (assembler)

- ① Remove the faceplate cover.
- ② Position the day release element on the back of the faceplate (directly on the latch above the lock case).
- ③ Screw on the day release element with the attached TX20 M4x10 screw on the front of the faceplate!

Installation Instructions

MACO day release opener assembly on the striker plate (assembler)

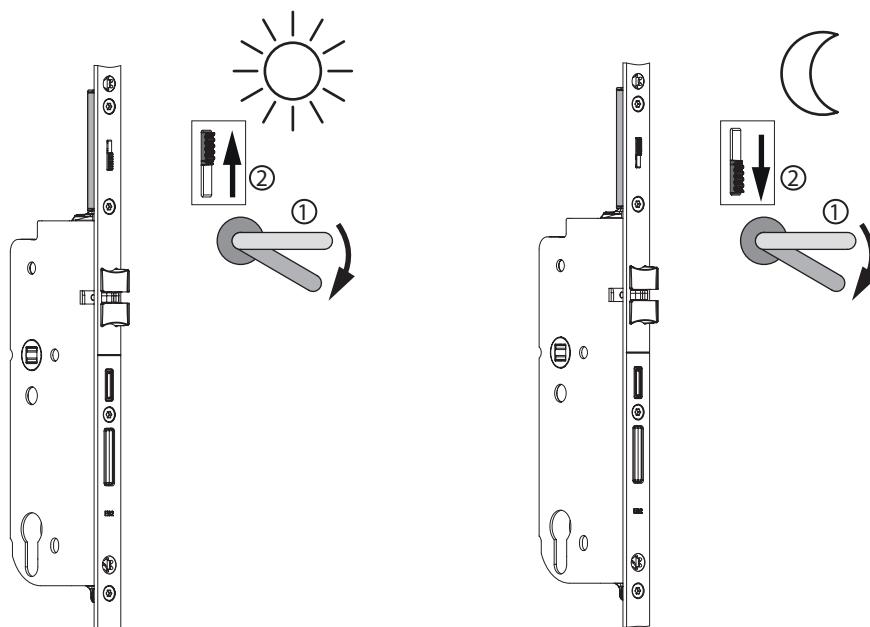

- ① Remove the latch insert.
- ② Assemble the MACO day release opener.
- ③ Activate the mechanical unlocking on the day release opener using the lever.

* The mechanical unlocking can remain active as the day release is controlled via the day release actuator on the lock (see "Day Release" operating instructions p.16).

Installation Instructions

Day Release operating instructions (end-customer)

Activate day release

- ① Press the handle so that the locking element and the multi-function latch are pulled in!
- ② Push the day release actuator upwards, release the handle!

Deactivate day release

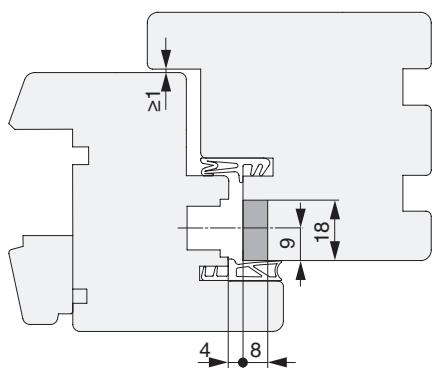

- ① Press the handle so that the locking element and the multi-function latch are pulled in!
- ② Push the day release actuator downwards!

The A-TS basic function, automatic locking, is again active!

Lengthening/shortening of the A-TS K+730

Module without additional locking point

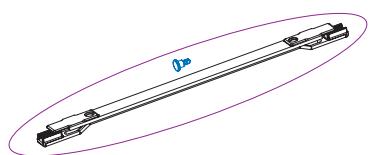

- ⇒ Only possible with A-TS K+730 module!
- ⇒ When using the lengthening or shortening faceplate, the standard eurogroove must be used!

Shortening faceplate pack

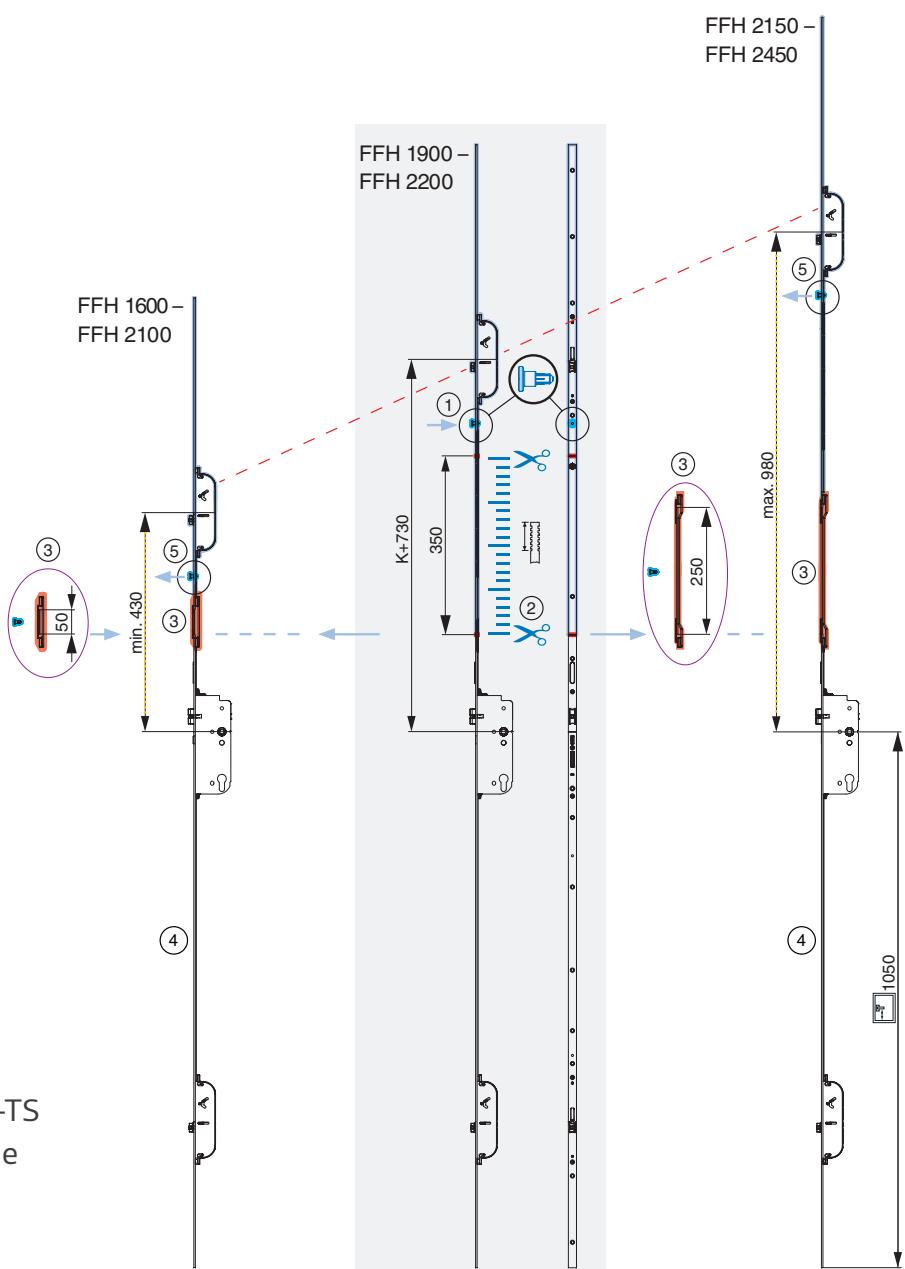

Contents: 1 pc. fixing bolt
with shortening faceplate and
deadbolt

Lengthening faceplate pack

Contents: 1 pc. fixing bolt with
lengthening faceplate and
deadbolt

- ① Pre-insert fixing bolts on Standard A-TS K+730 module.
 - ② Separate the faceplate and deadbolt.
 - ③ Insert the shortening or lengthening faceplate.
 - ④ Screw in the entire faceplate.
 - ⑤ Remove the fixing bolts on A-TS intermediate faceplate and the A-TS K+730 module.
- ⇒ Perform functional testing!

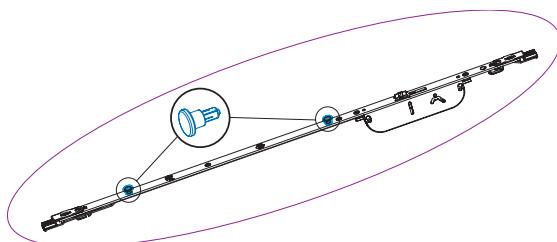

Extension of the A-TS K+730

Module with additional locking point

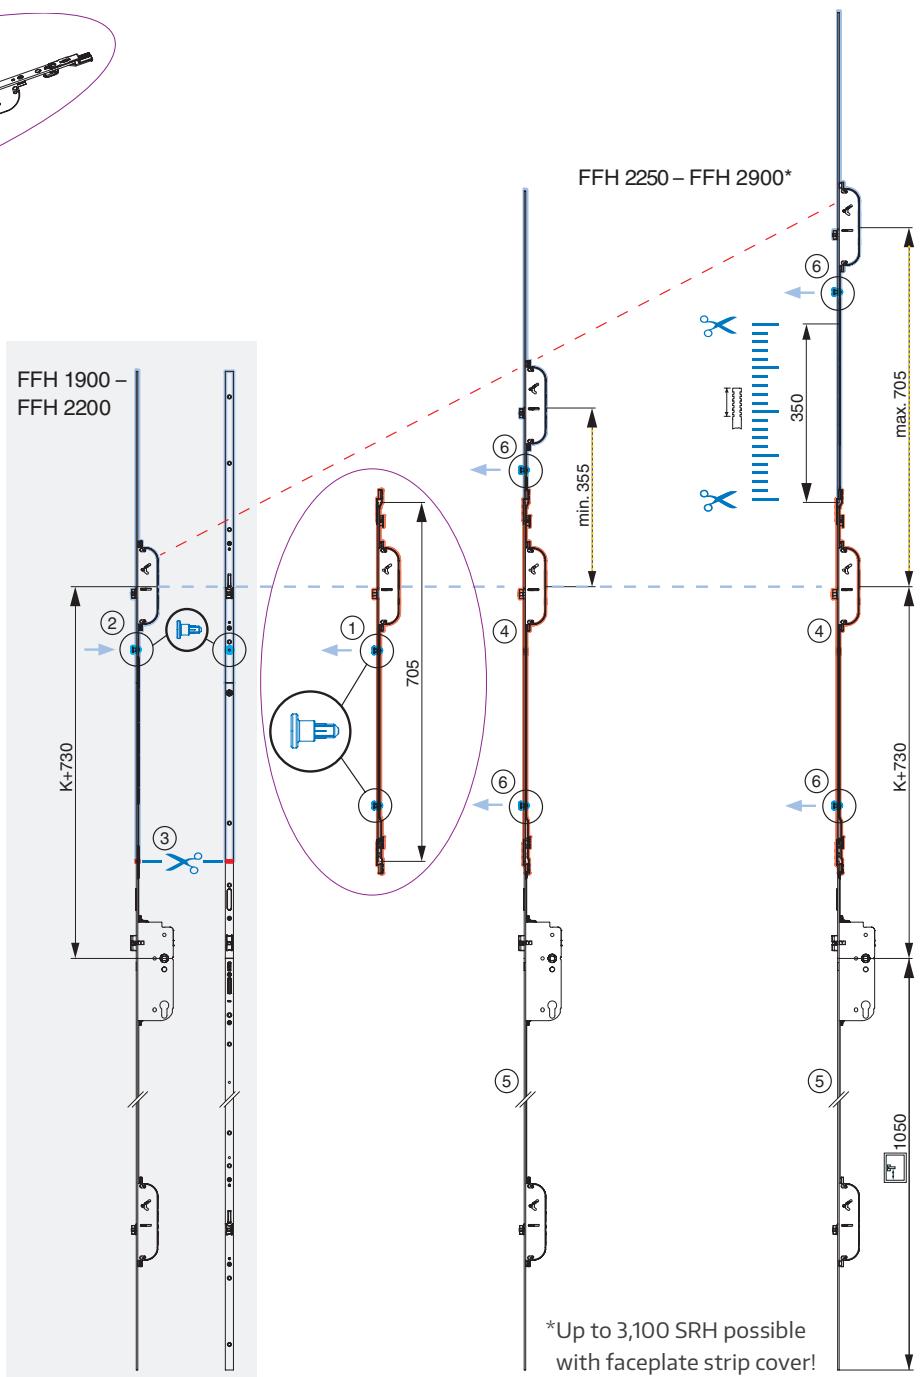

- ⇒ Only possible with A-TS K+730 module!
- ⇒ When using the A-TS intermediate faceplate module, the standard eurogroove must be used!

The A-TS intermediate faceplate module is delivered with two pre-inserted fixing pins!

- ① Remove 1 of the fixing pins from the intermediate faceplate.
 - ② Pre-insert fixing bolts on Standard A-TS K+730 module.
 - ③ Separate the faceplate and deadbolt.
 - ④ Insert the A-TS intermediate faceplate with the pre-fitted fixing pins.
 - ⑤ Screw in the entire faceplate.
 - ⑥ Remove the fixing bolts on the A-TS intermediate faceplate and on the A-TS K+730 module.
- ⇒ Perform functional testing!

VdS certification pertains only to the mechanical part of the multi-point lock.

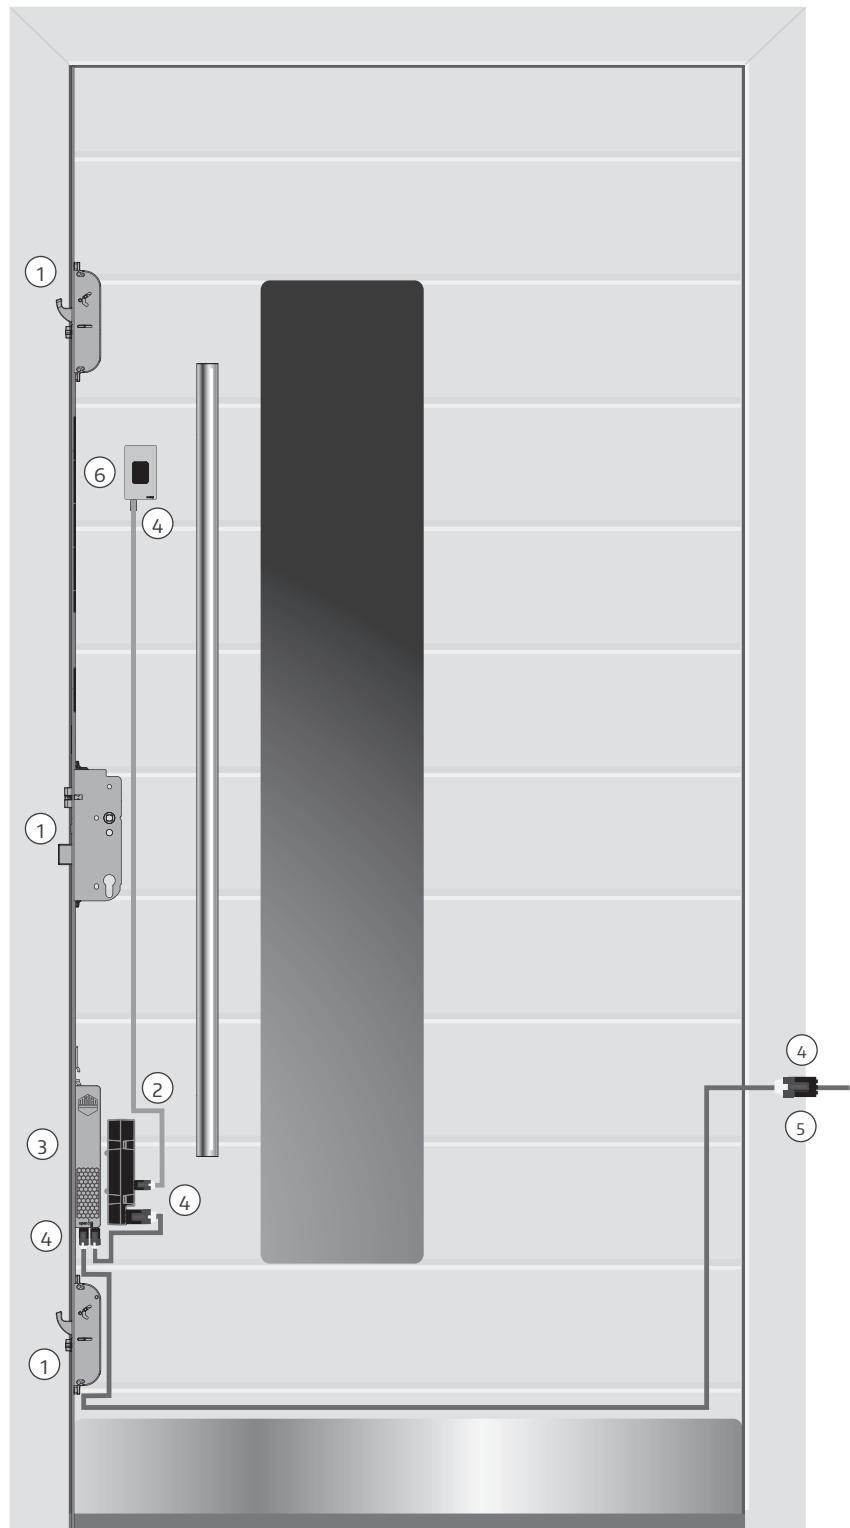

Access solutions and interfaces listed below are not included in the VdS certification!

Access solutions & interfaces

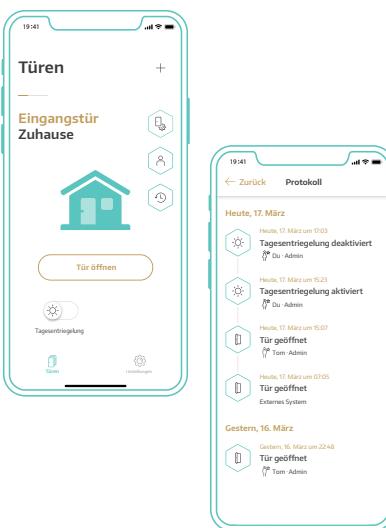

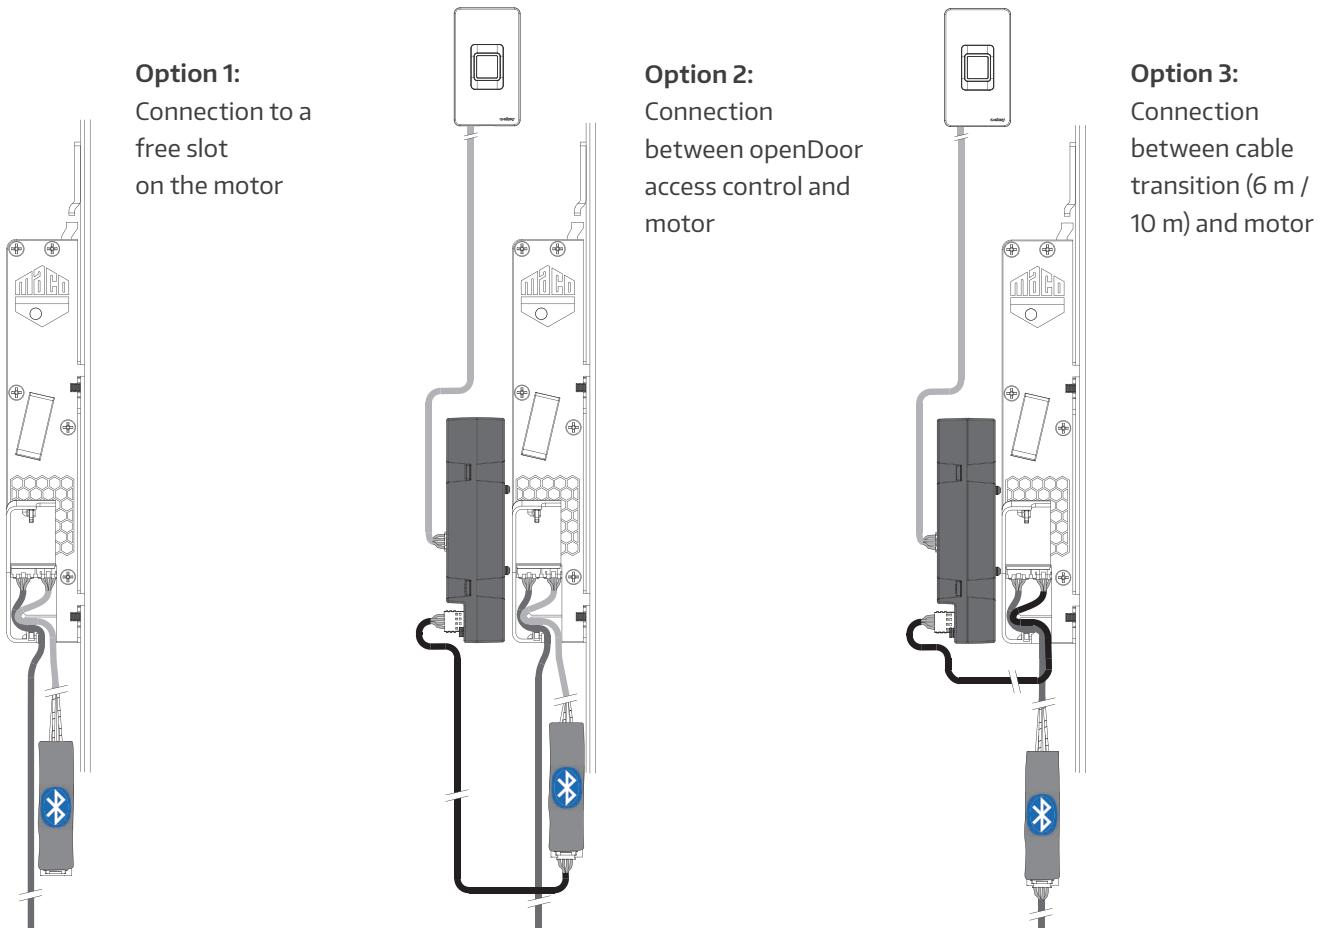

Overview

- ① **3-latch door lock with opening motor**
High security thanks to self-locking of steel hooks and locking latch.
- ② **Tamper-proof**
Control unit protected from unauthorised access.
- ③ Maximum comfort thanks to **motorised release**.
- ④ **Plug & Play**
Simple, non-mistakable plug-in connection.
- ⑤ **EASY mounting and de-mounting** of the door thanks to plug-in cable transition.
- ⑥ **openDoor Touchkey dLine**

*The control voltage is required for push-button (button impulse) and toggle switch (activation/deactivation of day-release)! See page 49/50.

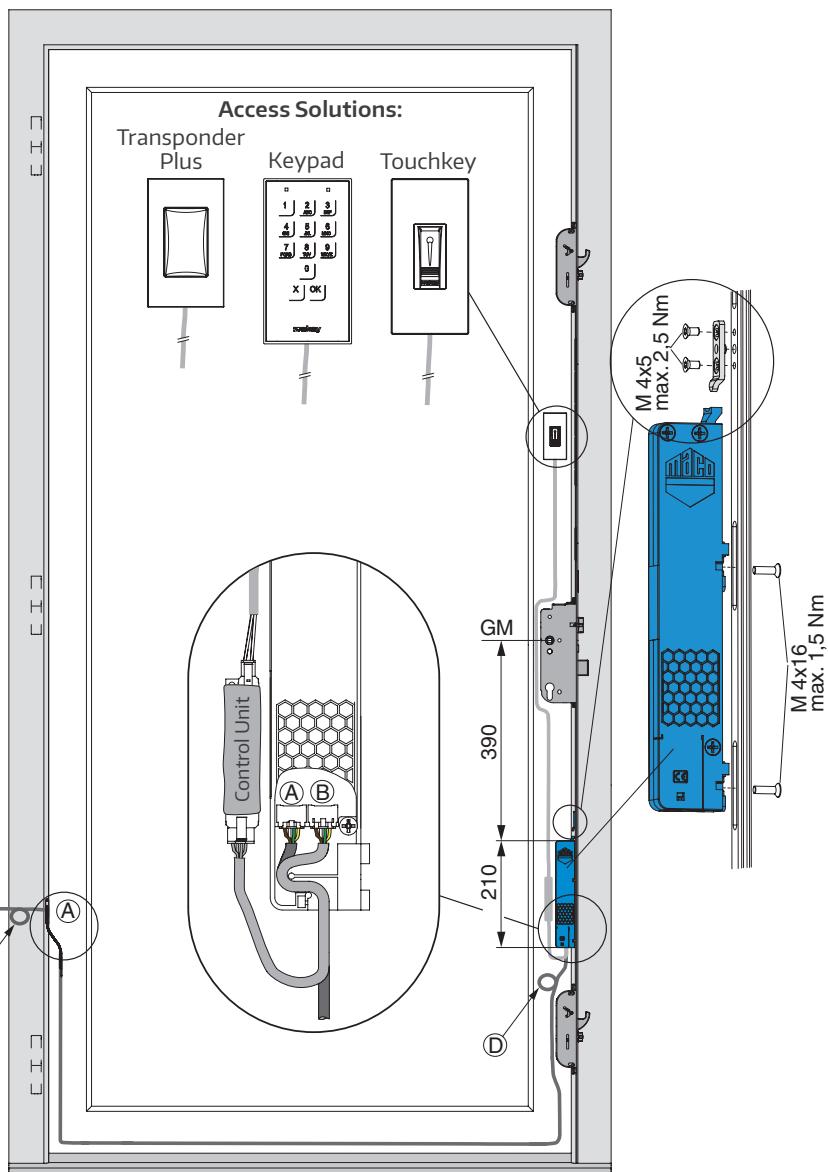

In order to avoid damage to the cables, drilling/milling must be deburred!

**DIN rail power supply

Electrical connections (connection of power supply, connection cable 6 m and 10 m) may only be carried out by authorised personnel!

**It is recommended to use the A-TS for motorised opening only with the power supply units that have been tested and approved for this purpose. These are designed for an input voltage of 220-240 V / 50-60 Hz and provide an output voltage of 24 V DC 1A with dynamic overcurrent 3A for 500 ms/ 7A for 100 ms. Alternatively, third-party products must have an output voltage of 12 - 24 V DC with min. 1.5A.

Connection plan UPS (uninterruptible power supply)

The use of the MACO UPS (Art. No. 480987) is recommended by MACO and bridges common, short-term power outages without functional restrictions. The bridging time depends on the actual system configuration. Should the unlikely event occur that a power failure occurs during a motorised opening or closing process, the mechanics may block. With the UPS, the lock moves to the desired position. Without a UPS, the M-TS can be operated manually by means of a key or handle (from the inside) in the event of a power failure in the closed or open state.

IMPORTANT! For UPS operation, at least one additional user (BLE module, access control,...) must be connected. Otherwise, the UPS will fall into standby mode and will NOT be active in the event of a power failure.

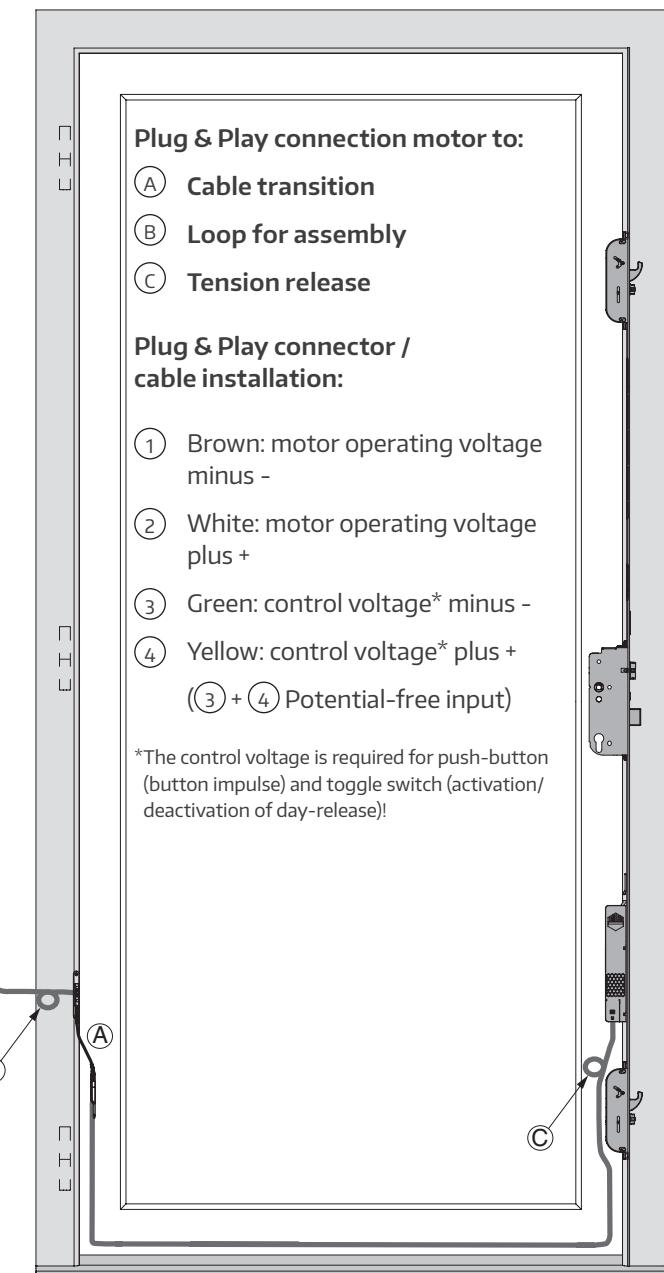

Electrical connections (connection of power supply, connection cable 6 m and 10 m) may only be carried out by authorised personnel!

**Flush-mounted power supply

**DIN rail power supply

**It is recommended to use the A-TS for motorised opening only with the power supply units that have been tested and approved for this purpose.
