Ventilating with closed windows

MACO VENT WINDOW REBATE VENTILATOR:
PROTECTS BOTH HEALTH & THE BUILDING FABRIC

MACO Vent window rebate ventilator

Automatic. Simple. Efficient.

Poor indoor air, condensation or mould – good air quality is essential for people's well-being and health. The building fabric can also be permanently damaged due to poor ventilation. The MACO Vent window rebate ventilator provides a remedy. It ventilates permanently and independently. Regardless of whether someone thinks about airing and without having to open a window.

Installed quickly

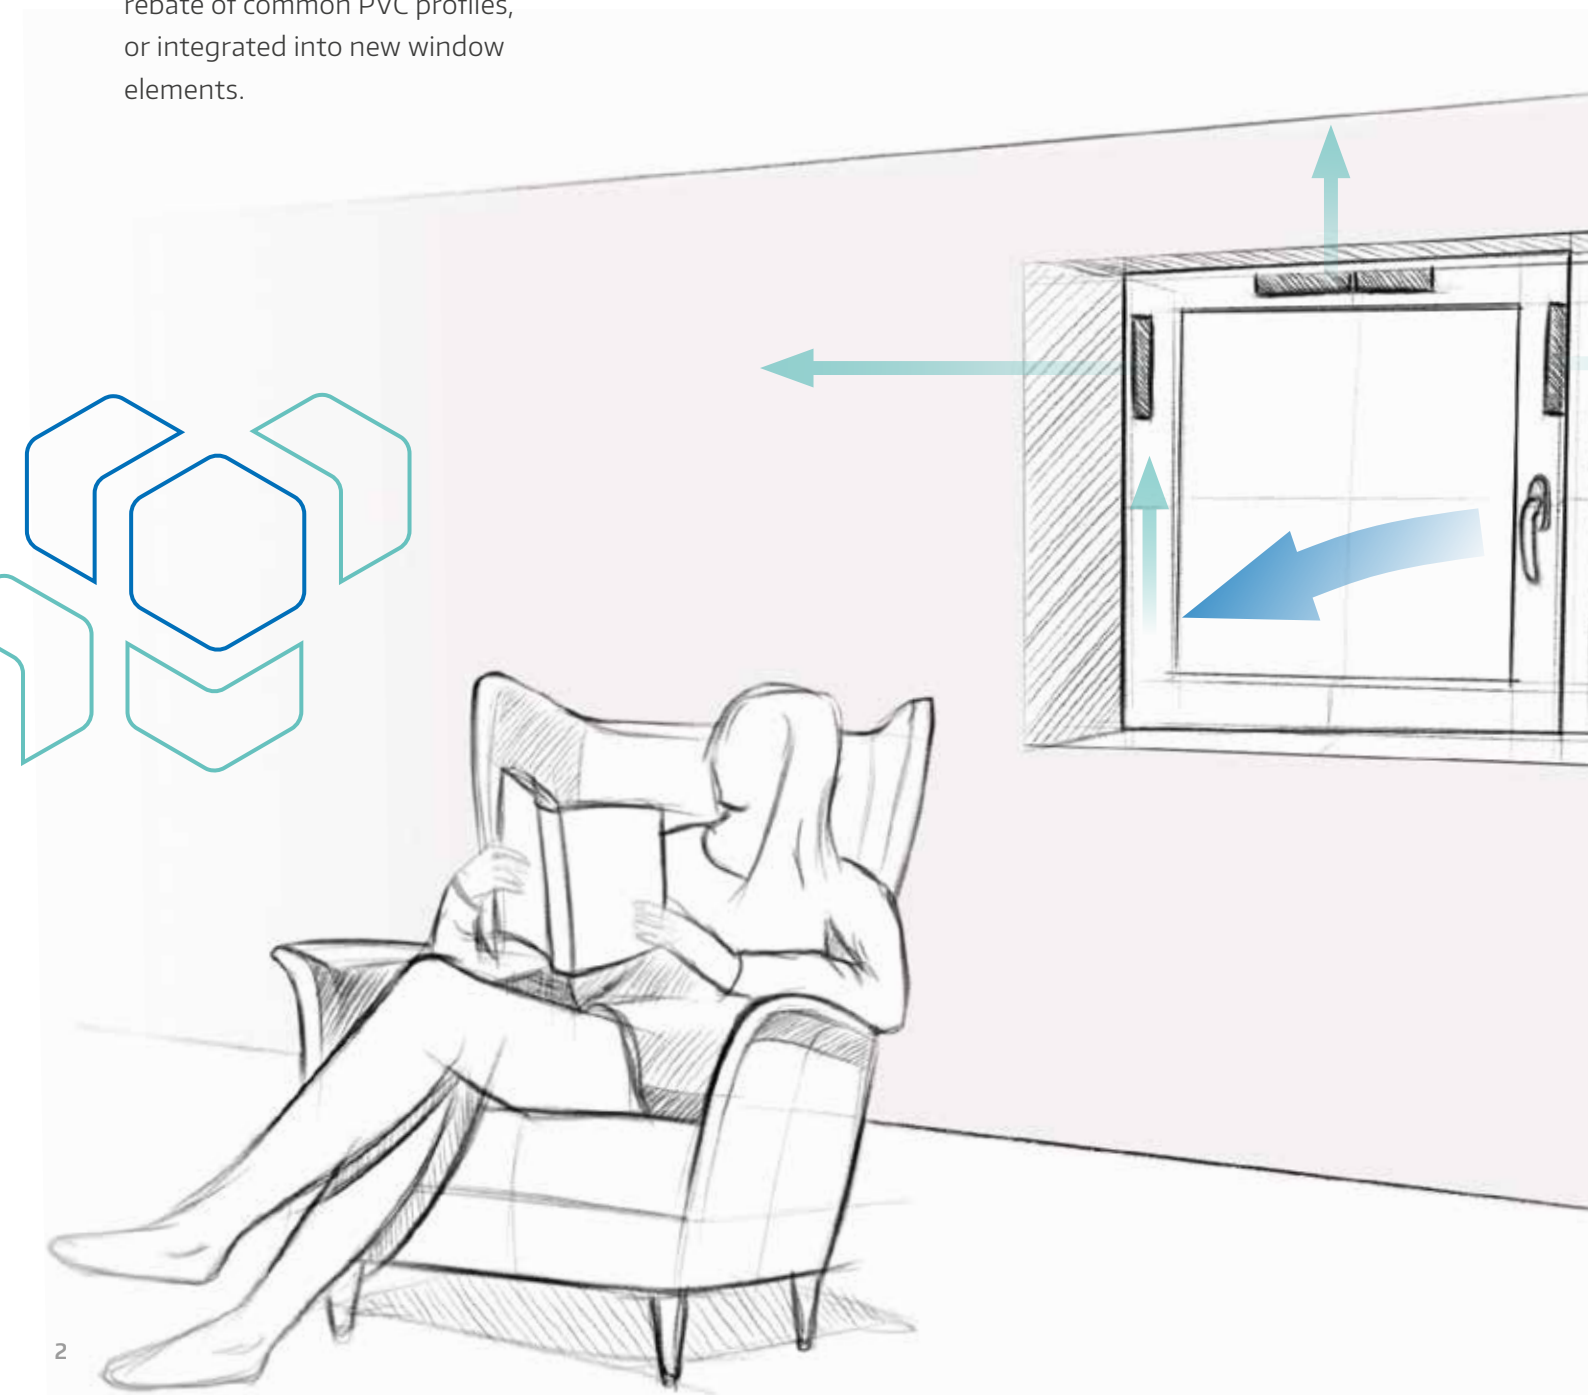

Can be retrofitted with just a few simple steps, only two screws and without additional milling work in the window rebate of common PVC profiles, or integrated into new window elements.

Heat efficient

Cold fresh air is pre-warmed in the window rebate and directed into the room.

Moisture protection

Moisture is transported away - mould is eliminated.

Strong arguments for end customers

Automatic Ventilation

Regulated minimum air exchange with the lowest energy losses – even if no one is at home and with the window closed!

No draughts

Even in strong winds! The aerodynamically effective flap minimises the air flow to the inside.

Invisible

Concealed in the window rebate, MACO Vent does not interfere with the appearance of the window element when it is closed.

Situational

The flap can be deactivated automatically or manually by the adjusting screw.

Soundproof

Whether the ventilator is open or closed, the sound insulation values are not affected by the installation of MACO Vent.

Economical

Window rebate ventilators are cheap to purchase, can be easily retrofitted and do not cause any additional maintenance.

Versatile use

A tiny product – a great help

MACO Vent ventilates for you – permanently and without your intervention. Thus, moisture and mould do not arise. Therefore, MACO Vent is the ideal solution for ...

Landlords

The structure of your properties is not damaged by moisture or mould, regardless of whether your tenants think about airing or not.

New buildings

Building moisture is dissipated autonomously.

Owners of vacant apartments

Even if your property is temporarily uninhabited, the permanent ventilation prevents mould and protects the building fabric.

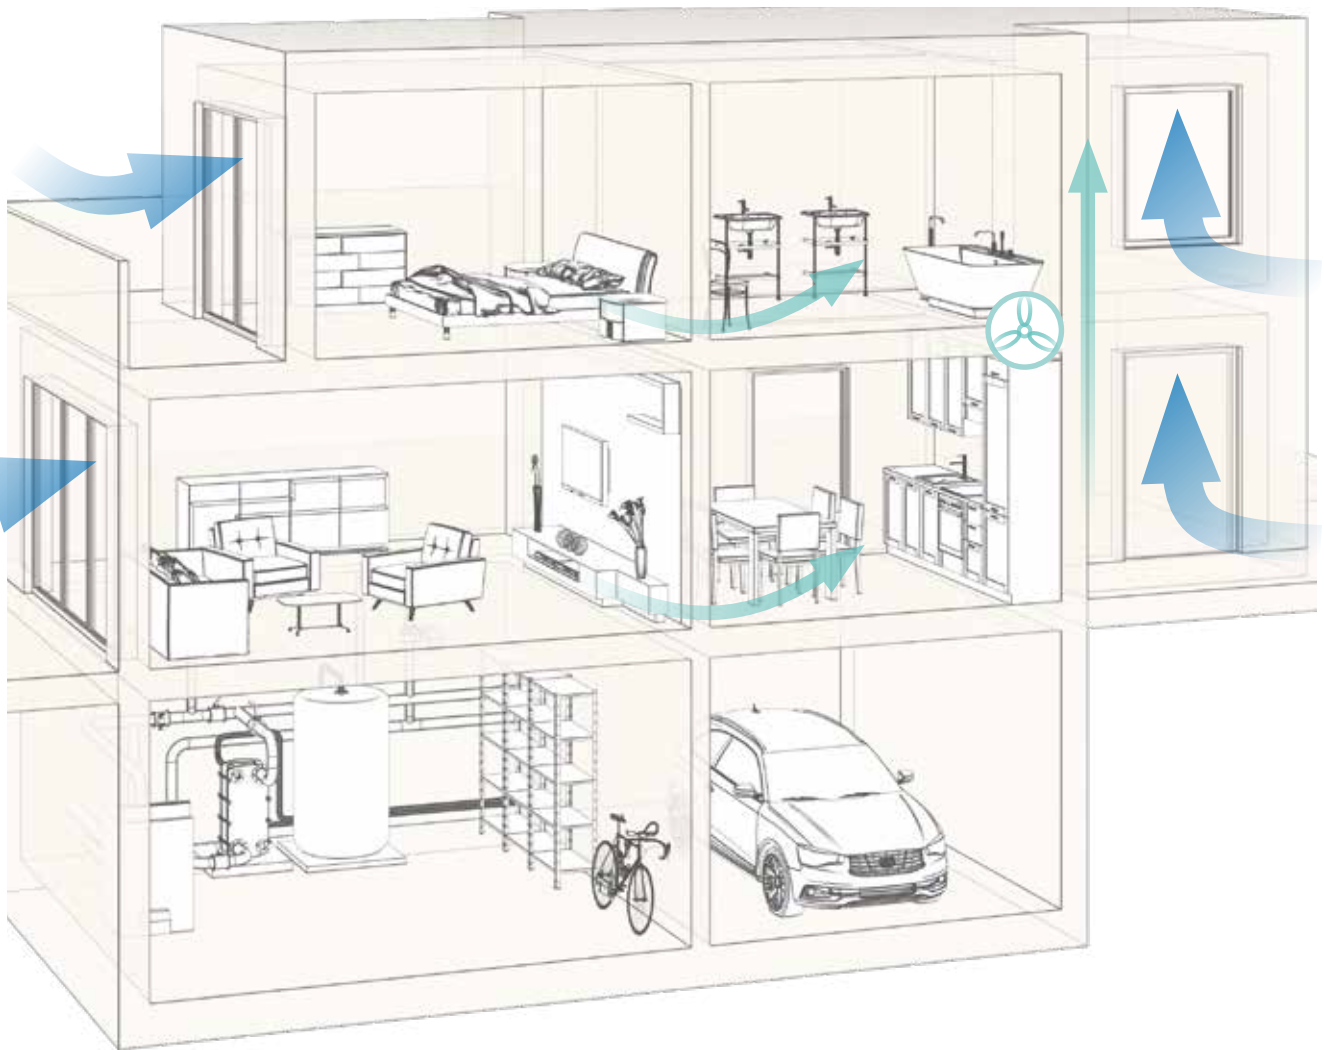

Renovations

Can be retrofitted at any time, without any structural changes – MACO Vent ensures a comfortable indoor climate.

The combination pays off

In contrast to decentralised and central ventilation systems, no structural changes need to be made with window rebate ventilators. Especially in combination with existing ventilation systems, they are an effective solution for mould prevention – and at the same time ensure a pleasant, healthy room climate.

Any Questions?

We are happy to advise you and find the ventilation solution that suits your needs.
