1 Technical and general information

1.1 How to use the catalogue

If not otherwise specified, all dimensions are stated in millimetres and packing units in items per box.

Drawings and diagrams are not to scale.

The content of this document is constantly being updated, so regular comparision is necessary (see date on the back of the catalog).

The current version is downloadable from our website (www.maco.eu).

Further technical documents are available in our Technical Online Catalogue TOM (extranet.maco.eu).

No liabilities are accepted for possible printing errors, mistakes or changes.

Please send comments or suggestions about our catalogues by email to feedback@maco.eu.

1.2 Product liability information

"PROTECT" Door Locks

In accordance with the manufacturer's liability for his products, which is defined in the "Product Liability Law" (§ 1 PHG), the following information is binding and should be considered for the entire "Protect" door lock product range. Non-compliance shall relieve the manufacturer of all liability.

1.2.1 Product information and conventional use

In terms of this definition, the door lock product range includes (door leaf and frame) fittings for timber, PVCu and aluminium doors and their corresponding material combinations. The functions of the door locks fundamentally consist of

- a) closing doors (keeping the door closed via latches) and
- b) locking the door (securing the door via additional locking elements).

Every MACO door lock is offered as a multipoint lock and is used for locking systems for vertically fitted doors. The MACO door lock product range offers two door lock systems that differ in their functionality:

1.2.1.1 Door lock with handle actuation (G-TS)

When closing and locking the G-TS, the locking elements are extended by actuating the handle upwards. After securing the door, the door lock is activated by turning the key through 360°. The handle can no longer be depressed; the locking elements are locked in place. The G-TS can be unlocked again by turning the key in the cylinder lock anti-clockwise through one rotation; the locking elements are no longer locked in place. By pressing the handle downwards, the locking elements are retracted at the same time as the latch and the door is therefore open again.

Important: Door handles must be fitted to the door interior and exterior for a handle actuated door lock!

1.2.1.2 Door lock with cylinder actuation (Z-TS / Z-TF)

After closing the door, the Z-TS / Z-TF is locked by turning the key in the profile cylinder through two 360° rotations. When doing this, the locking elements are extended into the striker plates and the door is locked. The Z-TS / Z-TF can be unlocked by turning the key through two anti-clockwise rotations; the latch can be retracted by actuating the handle and by turning the key in the profile cylinder.

A knob can be fitted to the door exterior for door locks with cylinder actuation.

The MACO multipoint locks are intended for combination with commercial profile cylinders according to DIN 18252 / EN 1303. The lock cases correspond to DIN 18251. In special cases the fitter of MACO door lock systems must ensure that the cylinder lock selected is suitable for the intended installation and that its functionality is guaranteed for the intended application.

1.2.2 Product installation

The MACO multipoint locks should only be fitted by specialists. The MACO door locks must be able to be inserted easily into the recesses provided in the fitting groove for lock cases, hook locks and finger bolt locks. Any component forced into the recesses can impair the functionality of the entire door lock system.

The lock faceplate must be screwed into the eurogroove using appropriate tools (torque function!). The striker plates (standard striker plates, EH Security-striker plates, hook and finger bolt striker plates) must be fitted in such a way that they allow the locking elements to be retracted unhindered and that even fully extended locking elements are not able to protrude as far as the stop in the striker plate.

To ensure the correct installation of the components, notches are punched on the lock cover and on the respective striker plate, which designate the optimal position of the striker plate to the door lock cover.

The MACO multipoint locks can be fitted to many types of house or side entrance doors. It should be noted that these components are not suitable to accommodate alterations in shape or alterations of the seal closure as a result of variations in temperature or building alterations.

1.2.3 Non-intended use and incorrect use

Please refer to the instruction manual for, among other things, incorrect use and non-intended use.

1.2.4 Product maintenance and information duty

In order to ensure perfect functionality of the MACO multipoint locks:

the necessary information and instructions are to be transferred to the appropriate persons;

the applicable standards are to be observed;

MACO multipoint locks must be used according to their defined function;

the manufacturer's regulations concerning the configuration of the hardware is to be observed;

maintenance and care instructions are to be followed;

faults may only be repaired by specialist personnel.

1.2.5 Product performance

Unless the product performances are explicitly specified in our catalogues and brochures, the requirements of the individual locking systems must be agreed with us. The information concerning product performance solely refers to the combination of MACO original parts. The efficiency of locking systems depends on, among other things, frequency of use, method of operation, environmental influences, maintenance and care.

1.3 Storage instructions fittings

Improper storage of fittings can affect the surface quality. To prevent this, the following points should be noted:

- Ensure that the room air is permanently dry.
- Large temperature fluctuations, which lead to condensation must be prevented. Condensation on fittings means that the galvanized surfaces are attacked (red rust formation).

- Aggressive vapors by cleaners or assembly aids such as silicone, and the like must - be avoided - even briefly. Vapors of such substances can cause very rapid corrosion of fittings.
- Salty air or polluted by industrial air causes galvanized surfaces to corrode and can leave deposits.

1.4 Certificates and guarantees

MACO ensures high quality, not only with ongoing continuous internal testing, but also through external auditing by renowned, independent institutes. Copies of all our current independent test certificates, covering our quality, safety and environmental management systems, as well as our product

guarantees are available to download from our website www.maco.eu. In addition our safety descriptions relating to dangerous substances (RoHS and REACH Declaration) are available, covering all MACO products.

1.5 General Terms and Conditions

Our current general terms and conditions are available for download from our website (www.maco.eu).

You want everything from a single source?

We provide you with complete solutions for sliding doors, windows and doors - for timber, PVC and aluminium. Experience our versatile system offer, comprehensive service included. Discover more of this on our website www.maco.eu or contact your MACO representative.

The collage consists of five separate brochures arranged in a grid-like fashion:

- Your world of doors**
THE MACO RANGE FOR YOUR TIMBER, PVC AND ALUMINIUM DOORS
- Your world of slide and tilt**
THE MACO RANGE FOR YOUR SLIDE AND TILT DOORS
- Your world of windows**
THE MACO RANGE FOR YOUR TIMBER, PVC AND ALUMINIUM WINDOWS
- MACO-InfinityView**
THE LIFT AND SLIDE REVOLUTION
