The handle-operated door lock MACO Protect handle-operated – simply versatile

TIMBER
PVC
ALU

One principle for great flexibility

Locking without the use of a key: **MACO Protect handle-operated door locks**. For door heights of up to 3,100 mm and with greater flexibility in the use of locking elements. Whether hooks, bolts or security bolts, all variants are possible - also in combination. The term "handle-operated" is derived from the operating mode. The door is locked by operating the handle upwards – without the use of a key.

Benefits for fabricators

01 Variety of materials

For timber, aluminium or PVC doors: **MACO Protect handle-operated door locks** are suitable for use in all material variants without exception.

02 Clever surface selection

Design and protection: With Silverlook Evo **MACO Protect handle-operated door locks** are particularly durable, and with Tricoat Evo, the locks can withstand even extreme environmental influences.

03 Flexible solutions

Left, right and for door heights up to 3,100 mm: **MACO Protect handle-operated door locks** offer great freedom of installation with minimum effort.

Benefits for consumers

01 Everyday convenience

Effortless opening and closing: **MACO Protect handle-operated door lock** solutions are especially smooth-running and very robust.

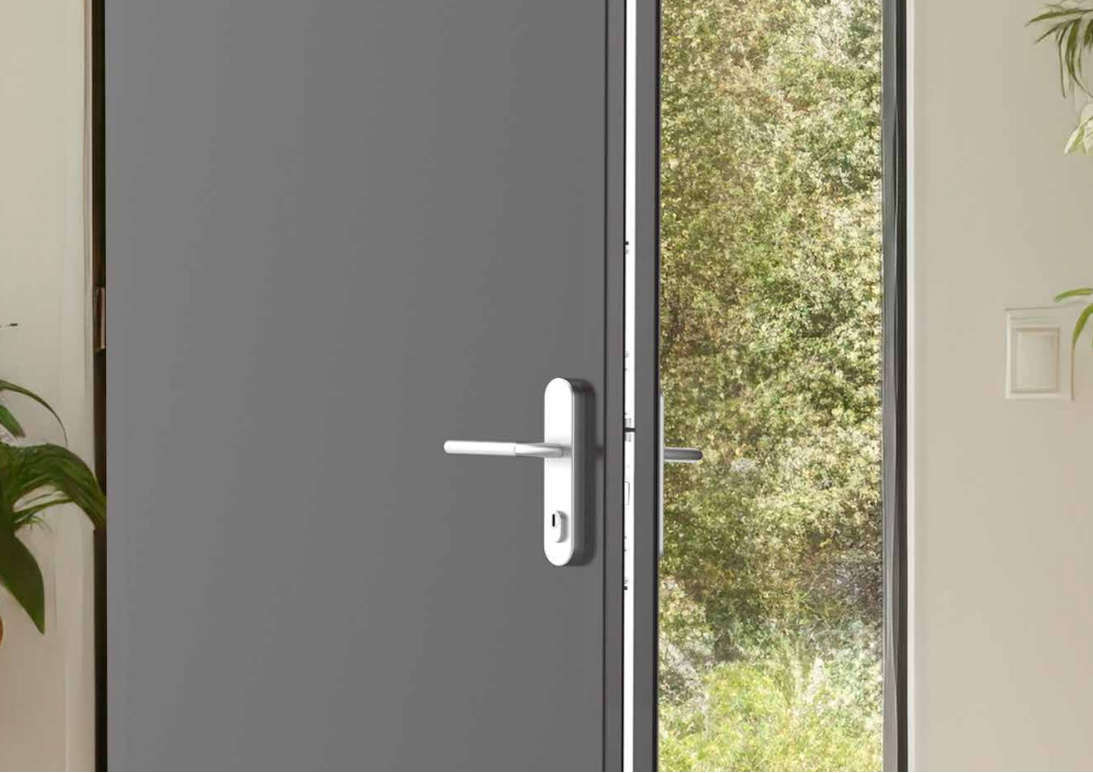

02 High burglary protection

Simply feel secure: **MACO Protect handle-operated door locks** enable solutions with customised burglary protection up to class RC 2.

03 Attractive design

Live better: **MACO Protect handle-operated door locks** elegantly combine the highest quality with timeless style. A combination that impresses every day.

Product variants

MACO Protect C-TS

Especially for the UK market: The **MACO Protect C-TS** locks doors using the handle when closing. The door can either be opened from the inside only, or from the outside and inside with a handle until it is locked with a key.

Innovation:

2 locks, 1 solution – MACO Protect stable door lock

Top open, bottom locked: The **MACO Protect stable door lock** can be used to fabricate stable doors that combine a traditional look with function. A **MACO Protect C-TS handle-operated door lock** is used in the top half of the door – and a **second one with an internal thumb turn** in the bottom half. This means just the top half of the door can easily be opened when desired.

MACO Protect G-TS

Proven and reliable: With the **MACO Protect G-TS**, the door is locked by operating the handle upwards. This extends all locking elements. The door can be opened from the outside and inside using the handle until it is locked with the key.

Product variants

MACO Protect S-AF

NEW

With the new **MACO Protect S-AF** door lock MACO offers a solution specially developed for the French market. When closing, the door locks automatically and all locking elements extend fully – without the need to operate the handle. The door can still be opened conveniently using the handle, both from the inside and the outside, until it is deliberately locked with a key. For greater security and ease of use in everyday life.

MACO Protect B-TV

Perfect for balcony, patio and standard side entrance doors: The **MACO Protect B-TV** is compatible with MACO Multi Matic (IQ) and locks doors via the handle when closing. The door can be opened from the outside and inside using the handle until it is locked with the key.

Coordinated solutions for a perfect fit System components for MACO Protect handle-operated

Handles, hinges and e-openers

For a personalised reception: **MACO ProDoor door hinges, handles** and **e-openers** offer a wide range of options and variants when it comes to design and fittings. Together, they create more security, convenience and attractive designs for every day.
